

DIGITAL CONSUMABLES CATALOGUE

CATALOGUE USER GUIDE

With this manual we are setting new standards of usability and customer experience in the world of welding technology. Integrated videos, quick links and clearly arranged tables open up new possibilities to get to know our highly demanding and most popular used products in an interactive way.

The new manual is a hybrid of what you know as well as used to and the advantages of a digital handbook. You can jump directly to the desired content, search in our online shop or get the datasheet with just few clicks. No more tedious flipping pages anymore.

General information

DOWNLOAD

In order to browse through this manual offline you need to download it. You will find the download button in the bottom right corner. Please be advised that certain features like tags, videos and captions, are not available once it's stored locally.

There you can also share, search and view the book in full screen.

ONLINE SHOP

Everyone can view our products but please be aware that you must register in order to be able to shop.

Explanation use of interactive icons

FIRST PAGE		VIDEO	
	Navigate to page one from every single page you are on.		Videos are included throughout the book to show you outstanding services or products.
LAST PAGE		CART	
	This symbol is used to feature the last page straight away.		To get detailed information about products you will see this symbol. There is also a link to our online shop.
NAVIGATE TO PAGE		TEXT TAG	
	If you see this symbol or if your mouse cursor turns into a hand then you will navigate directly to the page described.		Tagged text sections or product will find this icon throughout the manual.
CAPTION		TAG	
	The plus symbol indicates that there are further comments or captions.		Should you come across a shopping cart then you will be forwarded to our online shop.
DATASHEET INFORMATION			
If the cursor turns into a hand on the product name of a product overview page then you are able to view & download the relevant datasheet.			
BÖHLER Q E 6013 RT		Covered electrode, mild steel, rutile coated	
BÖHLER Q E 6013 RC		Covered electrode, mild steel, rutile-cellulosic coated

1 JOIN! voestalpine Böhler Welding

We are a leader in the welding industry with over 100 years of experience, more than 50 subsidiaries and more than 4,000 distribution partners around the world. Our extensive product portfolio and welding expertise combined with our global presence guarantees we are close when you need us.

Having a profound understanding of your needs enables us to solve your demanding challenges with Full Welding Solutions – perfectly synchronized and as unique as your company.

Lasting Connections – Perfect alignment of welding machines, consumables and technologies combined with our renowned application and process know-how provide the best solution for your requirements: A true and proven connection between people, products and technologies. The result is what we promise: Full Welding Solutions for Lasting Connections.

Tailor-Made Protectivity™ – Proven under the toughest conditions: Our products protect metal surfaces from wear and corrosion. With over 60 years of experience and the broadest product portfolio in the industry, we are your preferred partner for the supply of wear and corrosion resistant protection solutions. We deliver what we promise: Tailor-Made Protectivity™.

LASTING CONNECTIONS

1.1 Böhler Welding

Perfect alignment of welding machines, consumables and technologies combined with our renowned application and process know-how provide the best solution for your requirements: A true and proven connection between people, products and technologies.

**The result is what we promise:
Full Welding Solutions
for Lasting Connections.**

[click here](#)

Today's energy generation would be unthinkable
without welding consumables.
Welding would be unthinkable without Böhler Welding.

1.2 UTP

Proven under the toughest conditions:
Our products protect metal surfaces from wear and corrosion. With over 60 years of experience and the broadest product portfolio in the industry, we are your preferred partner for the supply of wear and corrosion resistant protection solutions.

**We deliver what we promise:
Tailor-Made Protectivity™.**

TAILOR-MADE PROTECTIVITY™

Today's raw materials production & processing would be unthinkable without UTP wear protection and corrosion resistant consumables.

JOIN! THE FULL WELDING SOLUTIONS!

for your Lasting Connections

1.3 Full Welding Solutions

Base materials, welding machines, consumables and more – many components contribute to perfect welding results. However, a Full Welding Solution by Böhler Welding is much more than the sum of its parts. We are recognized as the leading authority in weld metallurgy and this is the solid trusted base on which our solutions are built. Our competent and committed specialists accompany the entire process and remain at the customer's side until the work is done.

2 ABOUT THE BOOK

2.1 Explanation datasheet

<

- 1 **Product name** – Product designation
- 2 **Product specification** – Type of alloy
- 3 **Name of standard** – EN ISO and AWS classification, material number if applicable
- 4 **Properties and application areas** –
Properties to be emphasised such as resistance to corrosion or redrying data and typical areas of application
- 5 **Base materials** – e.g. base materials whose suitability has been tested by TÜV
- 6 **Reference analysis of the weld metal** –
Chemical composition by weight %
- 7 **Mechanical properties of the weld metal** –
Min. values at a room temperature of 20 °C
- 8 **Operating instructions** –
How to weld: possible welding position, polarity, dimensions
- 9 **Instructions for welding**
- 10 **Approval** – Existing approvals

Signs and symbols

Welding positions acc. to EN ISO 6947

- PA** Horizontal welding of butt weld and fillet weld in flat position
PB Horizontal welding of fillet weld (downhand position)
PC Transverse position
PD Horizontal overhead position
PE Overhead position
PF Vertical up position
PG Vertical down position

Welding position recommended

Welding position non-recommended

2.2 JOIN!online

voestalpine Böhler Welding is setting new standards of usability and customer experience in the world of welding technology. 24 hours a day, 7 days a week, 365 days a year: as of right now, voestalpine Böhler Welding is available online around the clock.

Many of the products of the Product Selection Tables in this manual are linked to our newly installed online shop JOIN!online. In addition to many other advantages, you have the opportunity to discover our complete product portfolio, search for products or download files such as the data sheet – 24 hours a day – 7 days a week – 365 days a year.

[click here](#)

EASE OF USE

- » Discover our complete product portfolio – from welding consumables through welding machines all the way to welding helmets and other accessories.
- » An advanced search function helps you find products or alternatives as quickly as possible.
- » As an alternative to the search function, you can also easily navigate to the products you are looking for via the product category menus.
- » Save time with the help of the intuitive and user-friendly interface.
- » Choice of different ways to add an article to your shopping cart. Depending on requirements, you can add individual items from the details page, create a quick order or upload a CSV file.
- » You will receive a complete manual with explanations of all shop functionalities. In addition, the FAQs are accessible directly in the shop and visible only to you as a registered user.
- » If you need any additional assistance, you can use the contact form at any time to get help from an expert advisor.

TIME SAVINGS, EFFICIENCY AND PERSONALISATION

- » The facility for comparing products and their key properties directly with one another helps you to make the right choice and saves you time.
- » The product data sheets are available to download directly from the product details page in each case.
- » Third-party approvals – such as TÜV data sheets or DB approval certificates – can also be downloaded directly from the product details page.
- » For direct delivery to your customers, you can select their addresses from a drop-down list in the shop itself.
- » A role concept with various functionalities configurable by you optimises the shop experience and its use to suit your requirements.
- » You can set individual authorisations, cost centres, limits, etc. so that your internal processes are catered for right from when you place the order.
- » You can assign and use your own article numbers in the shop. (E.g. search or order directly using your own article numbers.)
- » At article level, you can also add your own notes to individually customise the shop to your requirements.
- » As a registered user, you can see your own list prices and/or customer-specific prices for better guidance.
- » You can also simulate a current price enquiry because the checkout process prior to order submission takes into account and shows all current pricing terms (alloy surcharges, volume discounts, etc.) applicable on that date.
- » The current status of your order can be checked at any time in the shop.
- » You can view your individual purchase history over the last 12 months. You can also use the “Re-order” function to open a previous order as a template and amend it as required or submit it unchanged as a new order.

3.2 UTP description of product names

Name		Type	Welding process
UTP 65		Stick electrode	SMAW
UTP A 6222 Mo		Solid wire / rod	GMAW / GTAW
UTP Robotic 600		Seamless gas shielding flux-cored wire	FCAW-G
UTP Robotic 300 NG		Seamless self shielding flux-cored wire	FCAW-S
UTP PLASweld™ Ferro55		Metal powder	PTA & Laser welding
UTP COLDmelt™ Base 20		Metal powder	Flame Spraying
UTP SIMmelt™ NiBas 40		Metal powder	Flame Spraying
UTP SUBmelt™ NiBasW35		Metal powder	Flame Spraying
RECORD XXX		Agglomerated welding powder for hardfacing	SAW
RECORD RT XXX		Submerged arc strip cladding agglomerated flux for Wear Protection applications	SASC
RECORD ES XXXX		Stainless steel and high alloyed agglomerated flux	ESSC
RECORD EST XXX		Electroslag strip cladding	ESSC
RECORD ES XXXX-1		Single layer stainless steel and high alloyed agglomerated flux	ESSC
RECORD EST XXX-1		Single layer stainless steel and high alloyed agglomerated flux	ESSC
RECORD INT XXX		Stainless steel agglomerated flux	SASC
RECORD NFT XXX		Nickel base agglomerated flux	SASC
RECORD S XXXX		Stainless steel and high alloyed agglomerated flux	SASC
SOUDOTAPE		Strip electrode	SASC/ESSC

WEARstick		Covered electrodes for wear protection	SMAW
WEARtig		TIG rods for wear protection	GTAW
WEARMig		Solid wires for wear protection	GMAW
WEARcore		Gas-shielded folded flux-cored wires for wear protection	FCAW
WEARcore x-O		Self-shielded folded flux-cored wires for wear protection	FCAW-S
WEARspray x-M		Arc spraying cored wires (spraying without fusion) for wear & corrosion protection will be renamed to WEARcore x-M	Arc spraying
WEARspray x-MF		All arc spraying cored wires (spraying with subsequent fusion) for wear and corrosion protection will be renamed to WEARcore x-M	SAW
WEARMig x-S		Sub-arc folded flux-cored wires for wear protection for wear protection will be renamed to WEARMig x-S	SAW
WEARcore x-S		Sub-arc cored wires for wear protection for wear protection will be renamed to WEARcore x-S	SAW
Multi-purpose	Dur	The name addition Dur stands for standard products for abrasion	
Extreme abrasion	XD	The name addition XD stands for products for extreme wear protection	
Tool steels	Tool	The name addition Tool stands for products for tool steel applications	
Cobalt alloys	Co	The name addition Co stands for products for cobalt alloys	

3.3 Böhler Welding unalloyed selection table – < 460 MPa

4 BÖHLER WELDING CONSUMABLES PRODUCT CONTENT

4.1	SMAW – Stick electrodes	38
4.1.1	Mild steel – Rutile	38
4.1.2	Mild steel – Basic low hydrogen	40
4.1.3	Mild steel – High recovery	42
4.1.4	Pipeline – Cellulosic	42
4.1.5	Pipeline – Basic vertical down	44
4.1.6	Pipeline – Basic vertical up	44
4.1.7	Low alloy steel – High strength	46
4.1.8	Low alloy steel – Low temperature	48
4.1.9	Low alloy – Creep resistant	48
4.1.10	Stainless steel – Austenitic steels	52
4.1.11	Stainless steel – Ferritic steels	56
4.1.12	Stainless steel – Martensitic steels	56
4.1.13	Stainless steel – Duplex	58
4.1.14	Stainless steel – Special applications & dissimilar joints	60
4.1.15	Stainless steel – Heat resistant	62
4.2	GTAW – TIG Rods	64
4.2.1	Mild steel	64
4.2.2	Low alloy steel – High strength	64
4.2.3	Low alloy steel – Creep resistant	66
4.2.4	Low alloy steel – Low temperature	68
4.2.5	Stainless steel – Martensitic steels	68
4.2.6	Stainless steel – Austenitic steels	70
4.2.7	Stainless steel – Ferritic steels	72
4.2.8	Stainless steel – Low temperature	74
4.2.9	Stainless steel – Special applications	74
4.2.10	Stainless steel – Duplex	74
4.2.11	Stainless steel – High temperature	76
4.2.12	Non-ferrous – Aluminium	76

4.3	GMAW – Solid wires	78
4.3.1	Mild steel	78
4.3.2	Pipeline steel	80
4.3.3	Low alloy steel – High strength	82
4.3.4	Low alloy steel – Creep resistant	84
4.3.5	Stainless steel – High temperature	86
4.3.6	Stainless steel – Austenitic steels	86
4.3.7	Stainless steel – Special applications	90
4.3.8	Stainless steel – Duplex	90
4.3.9	Stainless steel – Ferritic steels	92
4.3.10	Stainless steel – Low temperature	92
4.3.11	Stainless steel – Martensitic steels	92
4.3.12	Non-ferrous – Aluminium	94
4.3.13	Wire arc additive	96
4.4	FCAW-G – Gas-shielded flux-cored wires	100
4.4.1	Mild steel – Rutile	100
4.4.2	Mild steel – Basic	100
4.4.3	Mild steel – Metal cored	102
4.4.4	Pipeline – Rutile	104
4.4.5	Low alloy steel – Creep resistant	104
4.4.6	Low alloy steel – High strength	106
4.4.7	Low alloy steel – Low temperature	110
4.4.8	Low alloy steel – Weather resistant	112
4.4.9	Stainless steel – Austenitic steels	112
4.4.10	Stainless steel – Duplex	114
4.4.11	Stainless steel – Ferritic steels	116
4.4.12	Stainless – Heat & creep resistant	116
4.4.13	Stainless – Low temperature	116
4.4.14	Stainless – Martensitic steels	118
4.4.15	Special applications & dissimilar joints	118
4.5	FCAW-S – Self-shielded flux-cored wires	120
4.5.1	Mild steel	120
4.5.2	Pipe steel	120

4.6	SAW – Solid wires	122
4.6.1	Mild steel	122
4.6.2	Low alloy steel – Creep resistant	122
4.6.3	Low alloy steel – High strength	124
4.6.4	Low alloy steel – Low temperature	126
4.6.5	Stainless steel – Austenitic steels	126
4.6.6	Stainless – Dissimilar joints	128
4.6.7	Stainless – Duplex	128
4.6.8	Stainless – Ferritic steels	128
4.6.9	Stainless – Heat resistant	130
4.6.10	Stainless – Martensitic steels	130
4.7	SAW – Flux-cored wires	132
4.7.1	Mild steel	132
4.7.2	Low alloy steel – High strength	132
4.8	SAW – Fluxes	134
4.8.1	Mild and low alloy steel	134
4.8.2	Stainless steel – Nickel based	136
4.9	SAW – Combinations	138
4.9.1	Mild steel	138
4.9.2	Low alloy steel – Creep resistant	140
4.9.3	Low alloy steel – High strength	144
4.9.4	Low alloy steel – Low temperature	146
4.9.5	Stainless steel – Austenitic steels	148
4.9.6	Stainless steel – Dissimilar joints	152
4.9.7	Stainless steel – Duplex	152
4.9.8	Stainless steel – Ferritic steels	152
4.9.9	Stainless steel – Heat resistant	154
4.9.10	Stainless steel – Martensitic steel	154
4.10	SAW – Combinations seamless	156
4.10.1	Mild steel	156
4.10.2	Low alloy steel – High strength	156

4.1 SMAW – Stick electrodes

4.1.1 Mild steel – Rutile

Product name	Short description	Chemical composition (typical values) in %		
		C	Si	Mn
BÖHLER Q E 6013 RT	Covered electrode, mild steel, rutile coated	0.08	0.35	0.55
BÖHLER Q E 6013 RC	Covered electrode, mild steel, rutile-cellulosic coated	0.08	0.4	0.5
BÖHLER FOX Green	Covered electrode, mild steel, rutile coated, for welding of thin sheets	0.08	0.35	0.5
BÖHLER FOX SUM	Covered electrode, mild steel, thick rutile coated	0.07	0.3	0.5
BÖHLER FOX ETI	Covered electrode, mild steel, rutile coated	0.07	0.4	0.5
BÖHLER FOX OHV	Covered electrode, mild steel, rutile-cellulosic coated	0.06	0.4	0.45
BÖHLER FOX KE	Covered electrode, mild steel, rutile coated, mixed type	0.06	0.3	0.5
BÖHLER FOX SPE	Covered electrode, mild steel, rutile-basic coated	0.08	0.2	0.45
BÖHLER FOX Yellow	Covered electrode, mild steel, rutile-basic coated	0.08	0.2	0.55
Phoenix Blau	Covered electrode, mild steel, rutile-cellulosic coated	0.09	0.35	0.5
Phoenix Grün T	Covered electrode, mild steel, rutile coated, well suited for tack welding	0.08	0.35	0.55

4.1.2 Mild steel – Basic low hydrogen

Product name	Short description	Chemical composition (typical values) in %			
		C	Si	Mn	
BÖHLER Q E 7018	Covered electrode, mild steel, basic coated, down to -40°C	0.07	0.5	1.1	
BÖHLER Q E 7018-1	Covered electrode, mild steel, basic coated, down to -50°C	0.07	0.5	1.1	
BÖHLER FOX EV 40	Covered electrode, mild steel, basic coated, extra low strength	0.06	0.3	1.0	
BÖHLER FOX EV 47	Covered electrode, mild steel, basic coated, lower strength	0.06	0.3	0.9	
BÖHLER FOX EV 50	Covered electrode, mild steel, basic coated, down to -50°C	0.08	0.4	1.2	
BÖHLER FOX EV 50-W	Covered electrode, mild steel, basic coated, suitable for AC current	0.07	0.5	1.1	
BÖHLER FOX EV 55	Covered electrode, mild steel, basic coated, higher strength	0.07	0.35	1.4	
BÖHLER FOX K 55	Covered electrode, mild steel, basic coated; special for rail frogs	0.07	0.4	1.35	
Phoenix 120 K	Covered electrode, mild steel, basic coated, suitable for DC +/- and AC	0.07	0.35	1.2	
Phoenix Spezial D	Covered electrode, mild steel, basic coated, double coated electrode	0.06	0.65	1.05

4.1.3 Mild steel – High recovery

Product name	Short description	Chemical composition (typical values) in %			
		C	Si	Mn	
BÖHLER FOX Red R 160	Covered electrode, mild steel, rutile coated, 160% high efficiency	0.07	0.35	0.65	
BÖHLER FOX Red AR 160	Covered electrode, mild steel, rutile-acid coated, 160% high efficiency	0.08	0.3	0.9	
BÖHLER FOX Red BR 160	Covered electrode, mild steel, rutile-basic coated, 160% high efficiency	0.08	0.4	0.85	
BÖHLER FOX Multifер 180	Covered electrode, mild steel, rutile coated, 180% high efficiency	0.07	0.33	0.7	
BÖHLER FOX HL 180 Ti	Covered electrode, mild steel, rutile coated, 180% high efficiency	0.07	0.5	0.8	

4.1.4 Pipeline – Cellulosic

Product name	Short description	Chemical composition (typical values) in %				
		C	Si	Mn		
BÖHLER FOX CEL	Covered electrode, mild steel, cellulose coated, pipeline welding, low strength	0.12	0.14	0.5		
BÖHLER FOX CEL+	Covered electrode, mild steel, cellulose coated, for root-pass pipeline welding on DC +	0.17	0.15	0.6		
BÖHLER FOX CEL Mo	Covered electrode, mild steel, cellulose coated, Mo-alloyed, pipeline welding	0.1	0.14	0.4	0.5	
BÖHLER FOX CEL 70-P	Covered electrode, mild steel, cellulose coated, pipeline welding with very intense arc, low-middle	0.15	0.1	0.45	0.17	
BÖHLER FOX CEL 75	Covered electrode, mild steel, cellulose coated, pipeline welding, low-middle strength	0.14	0.14	0.7		
BÖHLER FOX CEL 80-P	Covered electrode, mild steel, cellulose coated, pipeline welding with very intense arc, middle-high	0.15	0.15	0.7	0.8	
BÖHLER FOX CEL 85	Covered electrode, mild steel, cellulose coated, pipeline welding, middle-high strength	0.14	0.15	0.75	0.7	
BÖHLER FOX CEL 90	Covered electrode, mild steel, cellulose coated, pipeline welding, highest strength	0.17	0.15	0.9	0.8

4.1.15 Stainless steel – Heat resistant

Product name	Short description	Chemical composition (typical values) in %			
		C	Si	Mn	Ni
Avesta 253MA	Covered electrode, high-alloyed, austenitic stainless, heat resistance up to 1100°C	C	Si	Mn	Ni
		0.08	1.5	0.7	10.5
Avesta 308/308H AC/DC	Covered electrode, rutile coated, high-alloyed, austenitic stainless, creep resistant	C	Si	Mn	Ni
		0.06	0.7	1.1	10.0
BÖHLER FOX E 347 H	Covered electrode, basic coated, core wire alloyed for austenitic stainless steel of type 347H	C	Si	Mn	Ni
		0.05	0.3	1.3	10.2
BÖHLER FOX E 308 H	Covered electrode, rutile-basic coated for creep resistant austenitic steels for temperatures up to 700°C	C	Si	Mn	Ni
		0.05	0.6	0.8	10.2
BÖHLER FOX FA	Covered electrode, high-alloyed, austenitic stainless, heat resistant up to 1100°C for similar Mo - free 25% Cr(Ni) steels	C	Si	Mn	Ni
		0.1	0.5	1.2	5.4
BÖHLER FOX FF	Covered electrode, basic coated, high-alloyed, austenitic stainless, heat resistant up to 950°C	C	Si	Mn	Ni
		0.1	1.0	1.1	12.2
BÖHLER FOX FF-A	Covered electrode, rutile coated, high-alloyed, austenitic stainless, heat resistant 309 type	C	Si	Mn	Ni
		0.1	0.8	0.9	12.5
BÖHLER FOX FFB	Covered electrode, basic coating, high-alloyed, austenitic stainless, cryogenic (-196°C) and heat resistant up to 650°C	C	Si	Mn	Ni
		0.12	0.6	3.2	20.5
BÖHLER FOX FFB-A	Covered electrode, rutile coating, high-alloyed, austenitic stainless, heat resistant up to 650°C	C	Si	Mn	Ni
		0.12	0.5	2.2	21.0
Thermanit ATS 4	Covered electrode, basic coated, high-alloyed, austenitic stainless, creep resistant,	C	Si	Mn	Ni
		0.05	0.3	1.6	9.5

4.4.14 Stainless – Martensitic steels

Product name	Short description	Chemical composition (typical values) in %					
		C	Si	Mn	Ni	Cr	
FOXcore 13/4-T1	Flux-cored wire, E 410NiMo type, high-alloyed, soft-martensitic stainless, all welding position, mix shielding gas	0.03	0.7	0.9	4.5	12.0	
FOXcore 13/4-MC	Metal-cored wire, EC 410 NiMo type, high-alloyed, soft-martensitic stainless	0.023	0.7	0.9	4.6	12.0	
FOXcore 13/4-MC F	Metal-cored wire, E410NiMo type, high-alloyed, soft-martensitic stainless, foundries application	0.023	0.7	0.9	4.6	12.2	
FOXcore 13/4-MC HD	Metal-cored wire, EC 410 NiMo type, high-alloyed, soft-martensitic stainless, high impact values for heat-treated weld metal and a very low hydrogen content	0.014	0.3	0.6	4.7	12.0	

4.4.15 Special applications & dissimilar joints

Product name	Short description	Chemical composition (typical values) in %					
		C	Si	Mn	Ni	Cr	
FOXcore 307-MC	Metal-cored wire, EC 307 type, high-alloyed, austenitic stainless, special applications, dissimilar joints, good resistance to embrittlement down to -60°C	0.1	0.6	6.3	9.2	18.8	
FOXcore 307-T0	Flux-cored wire, E 307L type, high-alloyed, austenitic stainless, special applications, high ductility and elongation, flat and horizontal positions, mix shielding gas	0.1	0.8	6.8	9.5	18.8	
FOXcore 307-T1	Flux-cored wire, E 307L type, high-alloyed, austenitic stainless, special applications, high ductility and elongation, all welding position, mix shielding gas	0.1	0.8	6.8	9.0	18.8	
FOXcore 309L-T0	Flux-cored wire, E 309L type, high-alloyed, austenitic stainless, special applications for dissimilar joints of Cr and CrNi(Mo)-steels, unalloyed or low-alloyed steels and for cladding of unalloyed or low-alloyed base metals, preferably in flat or horizontal position	0.03	0.7	1.4	12.5	23.0	
FOXcore 309L-T0 DG	Flux-cored wire, E 309 type, high-alloyed, austenitic stainless, special applications for surfacing low-alloyed steels and for dissimilar welds between mild steel and stainless steels, mix and 100% CO ₂ shielding gases	0.03	0.7	1.2	12.5	23.1	
FOXcore 309L-T1	Flux-cored wire, E 309L type, high-alloyed, austenitic stainless, special applications, primarily intended for surfacing low-alloyed steels and for dissimilar welds between mild steel and CrNi stainless steels, all welding position	0.03	0.7	1.4	12.5	23.0	
FOXcore 309L-T1 C1	Flux-cored wire, E 309L type, high-alloyed, austenitic stainless, special applications, primarily intended for cladding low-alloyed steels and for dissimilar welds between mild steel and stainless steels, all welding position, 100%CO ₂ shielding gas	0.03	0.6	1.3	12.4	23.0	
FOXcore 309L-MC	Metal-cored wire, EC 309L type, high-alloyed, austenitic stainless, special applications, for welding dissimilar joints between high-alloyed Cr and corrosion resistant austenitic CrNi(Mo) steels and mild or low-alloyed steels.	0.025	0.6	1.4	12.5	23.0	
FOXcore 309LMo-T0	Flux-cored wire, E 309LMo type, high-alloyed, austenitic stainless, special applications, for welding and cladding, flat and horizontal positions, mix shielding gas	0.03	0.6	1.4	13.5	23.0	
FOXcore 309LMo-T1	Flux-cored wire, E 309LMo type, high-alloyed, austenitic stainless, special applications, for welding and cladding, all welding position, mix shielding gas	0.03	0.7	1.4	12.5	23.0

4.8 SAW – Fluxes

4.8.1 Mild and low alloy steel

Product name	Short description
Marathon 543	Highly basic flux for creep resistant wire grades P91 and P92. (9-12 %Cr); power generation
UV 305	Rutile flux for fillet welds, single pass and 2-run, high welding speed, water-walls, gas bottles , t< 12mm with unalloyed, and creep resistant wires.
UV 306	Rutile flux for general purpose applications in mild steel, typically t< 25 mm; high welding speed.
UV 309 P	Pipe mill flux especially for 2-run procedures, very low diff hydrogen & low pick up, high current carrying capacity; X42 - X80; Typical wires : Union S 2, S 2 Si, S 2 Mo, S 3 NiMo 1, S 3 TiB, S 3 MoTiB.
UV 310 P	Pipe mill flux especially for 2-run procedures, very low diff hydrogen & low pick up, "copper-tested"; X42 - X80. Typical wires : Union S 2, S 2 Si, S 2 Mo, S 3 NiMo 1, S 3 TiB, S 3 MoTiB.
UV 400	Basic flux for general purpose, fine grained steel grades, with good compromise between operative welding characteristics and mechanical properties.
UV 418 TT	High basic flux for multi-purpose applications in Mild steel and low alloyed wires for high toughness requirements in large thickness. Especially very good results with multi-wire configurations in off-shore wind foundations and towers.
UV 419 TT-W	Highly basic flux for multi-purpose applications in large thickness, especially for high toughness (as welded and PWHT)
UV 420 TT	Standard highly basic flux for as welded conditions and PWHT.
UV 420 TT-LH	Standard highly basic flux for as welded conditions and PWHT with Hdiff < 5 ml/100gr.
UV 420 TTR	Highly basic flux with high purity for nuclear reactors with Union S 3 NiMo 1 and creep resistant applications especially with Union S 2 CrMo and S 1 CrMo 2. Very low level of diffusible hydrogen.
UV 420 TTR-C	Highly basic flux with high purity, optimised to maintain (high) strength after PWHT with very long duration. Also for normalising / quenching and tempering. Reduced Carbon loss. Very low level of diffusible hydrogen.
UV 420 TTR-W	High purity flux for nuclear reactors and creep resistant applications with Union S 2 CrMo and S 1 CrMo 2. Especially designed for AC and high toughness requirements.
UV 422 TT-LH	Highly basic flux for high strength applications with very low diffusible hydrogen and high toughness at low temperatures. Off-shore, heavy lifting constructions, penn stocks.
UV 430 TTR-W	Highly basic flux with high purity, especially designed for pressure vessels with CrMo2V base metal for petrochemical industry. Optimal compromise for high toughness and high creep rupture strength properties.
UV 511 TT	Special flux for matching 9%Ni applications; N&T, Q&T. Cryogenic.

4.8.2 Stainless steel – Nickel based

Product name	Short description	
Marathon 213	Fused flux. For easy slag removal and nice bead aspect with standard stabilised and non stabilised stainless wire grades.	
Marathon 801	General purpose flux for standard stabilised and non stabilised stainless wire grades. Easy slag removal and nice bead aspect. The flux compensates Cr-loss.	
Marathon 805	Basic flux for a nice welding performance combined with good mechanical properties. Thin fluid slag with self-releasing slag. For stabilised and non stabilised standard stainless wire grades (especially Duplex grades). The flux compensates Cr-loss.	
Marathon 431	Basic welding flux for a nice welding performance combined with good mechanical properties. Thin fluid slag with self releasing slag. For stabilised and non stabilised standard stainless wire grades (especially Duplex grades).	
Marathon 203	Highly basic flux for good mechanical properties and nice flat shiney weld bead surface. Only for non stabilised austenitic and soft martensitic stainless wire grades.	
Marathon 444	Flux with very high basicity index, for good mechanical properties and relative high resistance to hot cracking.	
Marathon 104	Flux with very high basicity index for Stainless steel and Nickelbase wire grades, with good mechanical properties and relative high resistance to hot cracking; good slag detachability and nice bead appearance. Especially recommended for cryogenic LNG applications with Thermanit NiMo C276 and 625.	
Marathon 504	Neutral flux for especially for Nickelbase wire grades, with good mechanical properties and high resistance to hot cracking; very good slag detachability and nice bead appearance. Also for weld overlay.

4.10 SAW – Combinations seamless

4.10.1 Mild steel

Product name	Short description	Chemical composition (typical values) in %		
		C	Si	Mn
diamondspark S 55 HP - UV 306	SAW-flux cored wire/flux combination with an aluminate-rutile flux, for welding of unalloyed structural steels and fine-grained structural steels up to MSYS = 500 MPa. Very low level of diffusible hydrogen.	0.04	0.7	1.75
diamondspark S 55 HP - UV 418 TT	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity for welding of unalloyed structural steels and fine-grained structural steels up to MSYS = 460 Mpa. Very low level of diffusible hydrogen and mechanical properties down to -60°C.	0,07	0,4	1,4
diamondspark S 56 HP - UV 400	SAW-flux cored wire/flux combination with an aluminate-basic flux for welding of unalloyed structural steels and fine-grained structural steels up to MSYS = 460 Mpa. Very low diffusible hydrogen and good for high heat-input at high welding speed.	0.06	0.3	1.6

4.10.2 Low alloy steel – High strength

Product name	Short description	Chemical composition (typical values) in %		
		C	Si	Mn
diamondspark S 550 HP - UV 400	SAW-flux cored wire/flux combination with an aluminate-basic flux, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 550 MPa.	0.06	0.4	1.7
diamondspark S 550 HP - UV 422 TT-LH	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 550 MPa. Very low level of diffusible hydrogen.	0.07	0.4	1.4
diamondspark S 550 HP-UV 420 TTR-C	SAW-flux cored wire/ flux combination with an agglomerate fluoride basic flux high basicity, for joint welding of pipe steels API-5L X70 and other high-strength, quenched and tempered fine grained structural steels up to MSYS = 550 MPa. Suitable for different welding conditions: as welded, annealed, quenched and tempered, Normalized and annealed	0.09	0.3	1.55
diamondspark S 700 HP - UV 422 TT-LH	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 690 MPa. Very low level of diffusible hydrogen.	0.05	0.3	1.6
diamondspark S 770 - UV 418 TT	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 690 Mpa with requirements concerning overmatching.	0.06	0.3	1.7
diamondspark S 770 - UV 422 TT-LH	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 690 Mpa with requirements concerning overmatching and very low level of diffusible hydrogen.	0.06	0.4	1.7
diamondspark S 900 HP - UV 422 TT-LH	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 890 MPa. Very low level of diffusible hydrogen.	0.08	0.4	1.9
diamondspark S 960 HP - UV 422 TT-LH	SAW-flux cored wire/flux combination with a fluoride-basic flux high basicity, for joint welding of quenched and tempered fine grained structural steels up to MSYS = 960 MPa. Very low level of diffusible hydrogen.	0.1	0.3	1.85
diamondspark S NiCu1 - UV 306	SAW-flux cored wire/flux combination with an aluminate-rutile flux, for weather resistant applications.	0.04	0.6	1.5
diamondspark S NiCu1 - UV 400	SAW-flux cored wire/flux combination with an aluminate-basic flux, for weather resistant applications.	0.04	0.35	1.4
diamondspark S NiCu1 - UV 418 TT	SAW-flux cored wire/flux combination with a fluoride-basic flux, for weather resistant applications with higher mechanical properties requirements	0.06	0.45	1.2

5 UTP WELDING CONSUMABLES PRODUCT CONTENT

WEAR PROTECTION	162
5.1 SMAW – Stick electrodes	162
5.1.1 Difficult to weld – Multi-purpose	162
5.1.2 Difficult to weld – Extreme abrasion	164
5.1.3 Cobalt alloys	164
5.1.4 Tool steels	166
5.2 GTAW – TIG Rods	168
5.2.1 Difficult to weld – Multi-purpose	168
5.2.2 Difficult to weld – Extreme abrasion	168
5.2.3 Cobalt alloys	168
5.2.4 Tool steels	170
5.3 GMAW – Solid wires	172
5.3.1 Difficult to weld – Multi-purpose	172
5.3.2 Tool steels	172
5.4 FCAW-G – Gas-shielded flux-cored wires	174
5.4.1 Difficult to weld – Multi-purpose	174
5.4.2 Difficult to weld – Extreme abrasion	174
5.4.3 Cobalt alloys	176
5.4.4 Tool steels	178
5.4.5 Martensitic stainless steels	178
5.5 FCAW-S – Self-shielded flux-cored wires	180
5.5.1 Difficult to weld – Multi-purpose	180
5.5.2 Difficult to weld – Extreme abrasion	180
5.5.3 Martensitic stainless steels	182
5.6 SAW – Cored wires	184
5.6.1 Multi-purpose	184
5.6.2 Tool steels	184
5.6.3 Martensitic stainless steels	186
5.7 SAW – Fluxes	188
5.7.1 SAW Fluxes	188
5.8 ESSC – SASC Strip electrodes and fluxes	190
5.8.1 Carbon steel strip electrode	190
5.8.2 Ferritic steel & low alloys martensite fluxes	190
5.8.3 Tool steel martensite strip electrode	192
5.8.4 Ferritic steel & low alloys martensite fluxes	192
5.8.5 Low carbon Ferritic stainless steel strip electrodes	192

5.8.6 Low carbon Ferritic stainless steel fluxes	192
5.8.7 Ferritic & Martensitic stainless steel strip electrodes	194
5.8.8 Martensitic stainless steel fluxes	194
5.8.9 Cobalt alloys strip electrodes	196
5.8.10 Cobalt alloys fluxes	196
5.9 ESSC – SASC Weld overlay combinations	198
5.9.1 Low alloy steels – Mild steel & low alloy steel	198
5.9.2 Tool steels	198
5.9.3 Ferritic stainless steel	200
5.9.4 Martensitic stainless steels	200
5.9.5 Cobalt alloys	200
CORROSION PROTECTION	202
5.10 SMAW – Stick electrodes	202
5.10.1 Pure nickel	202
5.10.2 Nickel Copper	202
5.10.3 NiCr alloys	202
5.10.4 NiCrMo alloys	204
5.11 GTAW – TIG Rods	206
5.11.1 Pure Nickel	206
5.11.2 Nickel Copper	206
5.11.3 NiCr alloys	206
5.11.4 NiCrMo alloys	208
5.12 GMAW – Solid wires	210
5.12.1 Pure Nickel	210
5.12.2 Nickel Copper	210
5.12.3 NiCr alloys	210
5.12.4 NiCrMo alloys	212
5.13 FCAW-G – Gas-shielded flux-cored wires	214
5.13.1 Corrosion Protection – Nickel alloys	214
5.14 SAW – Solid wires	216
5.14.1 Nickel alloys	216
5.15 SAW – Fluxes	218
5.15.1 Corrosion Protection – Nickel alloys	218

5.16	ESSC – SASC Strip electrodes and fluxes	220
5.16.1	Nickel & Nickel-Copper alloys	220
5.16.2	Nickel & Nickel-Copper alloy fluxes	220
5.16.3	Nickel-Iron-Chromium alloys	220
5.16.4	Nickel-Iron-Chromium alloy fluxes	220
5.16.5	Nickel-Chromium alloys & Nickel-Chromium-Iron alloys	222
5.16.6	Nickel-Chromium-Iron alloy fluxes	222
5.16.7	Nickel-Chromium-Molybdenum alloys	222
5.16.8	Nickel-Chromium alloy & Nickel-Chromium-Molybdenum alloy fluxes	224
5.16.9	Nickel-Chromium-Molybdenum-Tungsten alloys	224
5.16.10	Nickel-Chromium-Molybdenum alloy fluxes	226
5.16.11	Stainless steel – Ferritic	226
5.16.12	Stainless steel – Ferritic stainless steel and fluxes	226
5.16.13	Stainless steel – Austenitic	228
5.16.14	Stainless steel – Austenitic stainless steel fluxes	230
5.16.15	Stainless steel – Duplex stainless	232
5.16.16	Stainless steel – Duplex stainless steel fluxes	232
5.16.17	Stainless steel – Super austenitic	232
5.16.18	Stainless steel – Super austenitic stainless steel fluxes	234
5.16.19	Stainless steel – Super austenitic	234
5.16.20	Special alloy – Copper alloys and fluxes	234
5.17	ESSC – SASC Weld overlay combinations	236
5.17.1	Nickel alloys – Pure Nickel & Nickel-Copper alloys	236
5.17.2	Nickel Alloys – Nickel-Chromium-Iron & Nickel-Chromium-Molybdenum alloys	238
5.17.3	Nickel alloys – Nickel-Chromium-Molybdenum-Tungsten alloys	240
5.17.4	Nickel Alloys – Nickel-Iron-Chromium alloys	240
5.17.5	Austenitic stainless steel	242
5.17.6	Corrosion Protection – Duplex stainless steel	246
5.17.7	Super austenitic stainless steel	248
5.17.8	Copper alloys	248

SPECIAL APPLICATIONS		250
5.18	SMAW – Stick electrodes	250
5.18.1	Joining & Repair – Stainless steels	250
5.18.2	Joining & Repair – Copper alloys	252
5.18.3	Joining & Repair – Cast iron	252
5.18.4	Joining & Repair – Heat-resistant	254
5.18.5	Joining & Repair – Gouging	254
5.18.6	Joining & Repair – Underwater	254
5.19	GTAW – TIG Rods	256
5.19.1	Joining & Repair – Nickel and heat-resistant alloys	256
5.19.2	Joining & Repair – Copper alloys	258
5.19.3	Joining & Repair – Cast iron	258
5.20	GMAW – Solid wires	260
5.20.1	Joining & Repair – Nickel and heat-resistant alloys	260
5.20.2	Joining & Repair – Copper alloys	262
5.20.3	Joining & Repair – Cast iron	262
5.21	FCAW-G – Gas-shielded flux-cored wires	264
5.21.1	Joining & Repair – Nickel alloys	264
5.21.2	Joining & Repair – Cast iron	264
5.21.3	Joining & Repair – Multi-purpose	264
5.22	FCAW-S – Self-shielded flux-cored wires	266
5.22.1	Joining & Repair – Multi-purpose	266
5.22.2	Joining & Repair – Gouging	266
5.23	Metal powders	268
5.23.1	Flame-spraying powders for simultaneous melting	268
5.23.2	Flame-spraying powders for subsequent melting	268
5.23.3	Flame-spraying powders without melting (cold process)	270
5.23.4	Metal powders for PTA and laser surfacing – Steels difficult to weld	270
5.23.5	Metal powders for PTA and laser surfacing – Cobalt alloys	270
5.23.6	Metal powders for PTA and laser surfacing – Tool steels	272
5.23.7	PTA & laser powders for hardfacing – Cladding	272
5.24	Arc-spraying cored-wires	274
5.24.1	Cladding	274
5.24.2	WEAR protection	274

UTP – the new brand and portfolio approach

Tailor-Made Protectivity™ – Proven under the toughest conditions:
Our products protect metal surfaces from wear and corrosion.
With over 70 years of experience and the broadest product portfolio in the industry, we are your preferred partner for Surface Protection solutions.

We deliver what we promise:
Surface Protection tailored to your needs.

The following products are combined under the UTP brand:

- » Consumables for Surface Protection
 - Wear
 - Corrosion
- » Nickel based filler materials for cladding
- » Special alloys such as for cast iron or copper
- » Filler metals for electro slag cladding and sub powder cladding

Thanks to the sharpening of the product groups, there is no longer any overlap in the portfolios of the category brands.

WEAR PROTECTION

5.1 SMAW – Stick electrodes

5.1.1 WEAR protection – Difficult to weld – Multi-purpose

Product name		Short description	Chemical composition (typical values) in %				
New	Old		C	Si	Mn	Cr	
WEARstick Dur 250	UTP DUR 250	Basic coated stick electrode for tough surfacing against rolling wear. Hardness of the weld metal approx. 270 HB	0.2	1.1	1.2	0.8	
WEARstick Dur 300	UTP DUR 300	Basic coated stick electrode for tough surfacing against rolling wear. Hardness of the weld metal approx. 300 HB	0.1	0.7	1	3	
WEARstick Dur 350	UTP DUR 350	Basic coated stick electrode for crack-proof, wear-resistant surfacing. Hardness of the weld metal approx. 370 HB	0.2	1.2	1.4	1.8	
WEARstick Dur 580	UTP 670	Basic coated stick electrode for crack-proof, wear-resistant surfacing. Hardness of the weld metal approx. 58 HRC	0.4	1	1	9.5	
WEARstick Dur 600	UTP DUR 600	Basic coated hardfacing stick electrode against impact and abrasion. Hardness of the weld metal approx. 60 HRC	0.5	2.3	0.4	9	
WEARstick Dur 650	UTP DUR 650 Kb	Basic coated, tough-hard, abrasion-resistant hardfacing stick electrode. Hardness of the weld metal approx. 60 HRC	0.5	0.8	1.3	7	
WEARstick MnCr13	UTP BMC	Basic coated, chromium alloyed, Mn-steel stick electrode. Hardness of the weld metal approx. 260 HB	0.6	0.8	16.5	13.5	
WEARstick MnCr4	UTP 7200	Basic coated, CrNi-alloyed, Mn-hardsteel stick electrode. Hardness of the weld metal approx. 200 - 250 HB. After work-hardening 48 - 53 HRC	0.7	13	4.5	4	
WEARstick Mn18	UTP Chronos 18	Basic coated high-Mn-steel stick electrode for claddings exposed to compression and impacts. Hardness of the weld metal approx. 200 HB. After work-hardening approx. 45 HRC	0.6	0.5	17.6	Bal.	
WEARstick Hydrocav	UTP HydroCav	Basic-coated stainless stick electrode against cavitation wear. Hardness of the weld metal approx. 21 HRC. After work-hardening approx. 50 HRC	0.2	0.7	10	20

5.2 GTAW – TIG Rods

5.2.1 WEAR protection – Difficult to weld – Multi-purpose

Product name		Short description	Chemical composition (typical values) in %			
New	Old		C	Si	Mn	Cr
WEARtig Dur 600	UTP A Dur 600	TIG rod for wear resistant weld overlays to withstand impact and abrasion. Hardness of the weld metal approx. 58 HRC	0.5	3.0	0.5	9.5

5.2.2 WEAR protection – Difficult to weld – Extreme abrasion

Product name		Short description	Chemical composition (typical values) in %			
New	Old		W2C			
WEARtig XD FeW60	UTP A 7560	TIG rod for GTAW or oxy-fuel welding, tungsten carbides in an iron matrix. Excellent resistance to extreme mineral abrasion. Matrix hardness: 60 HRC Carbide hardness: 2500 HV	60			
WEARtig XD NiW60	UTP A 7550	TIG rod for GTAW or oxy-fuel welding, tungsten carbides in a nickel matrix, Excellent resistance to friction wear by hard, abrasive materials. Matrix hardness: 55 HRC Carbide hardness: 2500 HV	60			

5.2.3 WEAR protection – Cobalt alloys

Product name		Short description	Chemical composition (typical values) in %			
New	Old		C	Cr	W	Co
WEARtig Co 1	UTP A CELSIT 701 N	TIG rod, hardfacing, cobalt alloy. Excellent resistance to abrasion in combination with corrosion and high temperatures. Hardness: approx. 55 HRC	2.3	32.0	13.0	Bal.
WEARtig Co 6	UTP A CELSIT 706 V	TIG rod, hardfacing, cobalt alloy. Excellent resistance to metal-to-metal wear, cavitation and impacts in corrosive environments. Hardness: approx. 42 HRC	1.2	27.0	4.5	Bal.
WEARtig Co 12	UTP A CELSIT 712 SN	TIG rod, hardfacing, cobalt alloy. Excellent resistance to metal-to-metal and abrasive wear with moderate impacts. Hardness: approx. 50 HRC	1.8	29.0	8.5	Bal.
WEARtig Co 21	UTP A CELSIT 721	TIG rod, hardfacing, cobalt alloy. Excellent resistance to metal-to-metal wear and thermal shocks in corrosive environments. Hardness: approx. 32 HRC	0.25	2.8	28.0	5.0

5.4.4 WEAR protection – Tool steels

Product name		Short description	Chemical composition (typical values) in %				
New	Old		C	Mn	Si	Cr	
WEARcore Tool 50 Co	SK D35-G	Gas-shielded metal cored wire for hot work tool steels, stainless. Application temperature up to 650°C	0.16	0.1	0.7	13.0	
WEARcore Tool 58	SK 650-G	Gas shielded metal cored wire for cold and hot work tool steels and parts subject to abrasion and impacts	0.45	0.9	0.6	5.5	
WEARcore Tool 60	SK D20-G	Gas shielded metal cored wire, designed to deposit a molybdenum-alloyed high-speed steel	0.8	0.4	0.5	4.0	
WEARcore Tool NiCrCo	SK U521-G	Gas-shielded core wire, nickel alloy for surfacings on forging tools subjected to extremely high temperatures	0.01	0.3	18.5	Bal.	
UTP ROBOTIC 405	UTP AF ROBOTIC 405	Gas-shielded metal-cored wire, seamless, especially suited for automated welding, low carbon content, for forging tools	0.1	0.6	1.5	5.5	
UTP ROBOTIC 453	UTP AF ROBOTIC 453	Gas-shielded metal-cored wire, seamless, especially suited for automated welding, for wear-resistant hardfacings on parts subject to abrasion, compression and high temperature	0.25	0.4	1.0	5.0	
UTP ROBOTIC 503	UTP AF ROBOTIC 503	Gas-shielded metal-cored wire, seamless, especially suited for automated welding, especially suited for hot-wear resistant surfacing	0.25	0.4	0.7	5.5	
UTP ROBOTIC 554	UTP AF ROBOTIC 554	Gas-shielded metal-cored wire, seamless, especially suited for automated welding, very stable arc, low spatter emission, low amount of slag	0.30	0.50	0.95	6.5	
UTP ROBOTIC 603	UTP AF ROBOTIC 603	Gas-shielded metal-cored wire, seamless, Cr-Mo-W-V alloyed, for abrasion and moderate stress-resistant surfacing applications up to 550 °C with Ar/CO ₂ shielding gas	0.5	1	1.1	5.5	

5.4.5 WEAR protection – Martensitic stainless steels

5.5 FCAW-S – Self-shielded flux-cored wires

5.5.1 WEAR protection – Difficult to weld – Multi-purpose

Product name		Short description	Chemical composition (typical values) in %				
New	Old						
WEARcore Dur 58 TiC-O	SK 258 TiC-O	Self-shielded flux cored wire, martensitic Chromium-Titanium alloy designed to resist high stress abrasion with heavy impact	C	Si	Mn	Cr	
			1.8	0.2	0.9	6.1	
WEARcore Dur 200-O	SK Soudocore S8-O	Self-shielded core wire for build-ups carbon steel and cast iron parts	C	Si	Mn	Al	
			0.28	0.1	0.4	1.5	
WEARcore Dur 400-O	SK 242-O	Self-shielded core wire for rebuilding and hard surfacing alloy of Carbon steel parts subjected to adhesive wear with impacts	C	Si	Mn	Cr	
			0.11	0.6	0.6	2.4	
WEARcore MnCr13-O	SK AP-O	Self-shielded flux cored wire, multi-purpose cored wire, mainly used for rebuilding and joining of carbon and 14% Manganese steels	C	Mn	Si	Cr	
			0.37	16.0	0.3	12.8	

5.5.2 WEAR protection – Difficult to weld – Extreme abrasion

Product name		Short description	Chemical composition (typical values) in %				
New	Old						
WEARcore XD 70-O	SK Abra-Max-O/G	Self-shielded flux cored wire designed to give an extreme resistance against high-stress-grinding abrasion and erosion without impact, hardness can be achieved in the first layer	Special Fe base alloy				
WEARcore XD 63-O	SK A43-O	Self-shielded flux cored wire designed to resist high stress grinding abrasion at service temperature not exceeding 450 °C	C	Si	Mn	Cr	
			4.9	0.7	0.2	20.5	
WEARcore XD 65-O	SK A45-O	Self-shielded flux cored wire designed to resist high stress grinding abrasion with low impact and solid erosion at service temperatures up to 650 °C	C	Si	Mn	Cr	
			5.3	0.7	0.2	22.0	
WEARcore XD 60-O	SK 255-O	Self-shielded flux cored wire designed to deposit an alloy resistant to high stress grinding abrasion with low impact	C	Si	Mn	Cr

CORROSION PROTECTION

5.10 SMAW – Stick electrodes

5.10.1 Corrosion protection – Pure nickel

Product name	Short description	Chemical composition (typical values) in %							
UTP 80 Ni	Basic coated pure Ni stick electrode for joining and surfacing on pure Ni grades, including LC nickel and Ni-alloys	C	Si	Mn	Ni	Ti	Al	Fe	
		< 0.02	0.8	0.25	Bal.	2.0	0.2	0.1	

5.10.2 Corrosion protection – Nickel Copper

Product name	Short description	Chemical composition (typical values) in %							
UTP 80 M	Basic coated NiCu alloyed stick electrode for surfacing and joining of NiCu alloys	C	Si	Mn	Ni	Ti	Fe	Cu	Al
		<0.05	0.7	3	Bal.	0.7	1	29	0.3

5.10.3 Corrosion protection – NiCr alloys

Product name	Short description	Chemical composition (typical values) in %							
Thermanit Nicro 82	Ni-base stick electrode for joining and surfacing of heat resistant Cr and CrNi steels and Ni-alloys.	C	Si	Mn	Cr	Ni	Mo	Nb	Fe
		0.025	<0.4	5	19	Bal.	1.5	2.2	3
Thermanit 690	Ni-base stick electrode for joining of high corrosion resistant steels with resistance in oxidizing media like nitric acid.	C	Si	Mn	Cr	Ni	Nb	Fe	
		0.03	0.5	3.8	28	Bal.	1.8	8.5	
UTP 7015 NK	High efficiency Ni-base stick electrode for repair and joining of Ni-alloys and could tough steels. Buffer-layer cladding of Ni and Co alloys.	C	Si	Mn	Cr	Ni	Mo	Nb	Fe
		0.03	0.4	4.5	15	Bal.	1.2	2	7
UTP 7015	Ni-base stick electrode for joining of different materials and for cladding of un- and low-alloyed steels.	C	Si	Mn	Cr	Ni	Nb	Fe	
		0.025	0.4	6	16	Bal.	2.2	8	
UTP 7015 Mo	Ni-base stick electrode for joining of similar heat resistant NiCrMo alloys, heat resistant austenitic steels or cryogenic steels	C	Si	Mn	Cr	Ni	Mo	Nb	Fe
		0.04	0.4	3	16	Bal.	1.5	2.2	6

5.18.4 Special applications – Joining & Repair – Heat-resistant

Product name	Short description	Chemical composition (typical values) in %								
UTP 2133 Mn	Fully austenitic NiCr stick electrode for repair and build-up welding of similar heat-resistant steels	C	Si	Mn	Cr	Ni	Nb	Fe		
		0.14	0,5	4.5	21	33	1.3	Bal.		
UTP 2535 Nb	Basic coated stick electrode with high carbon content for welding heat resistant CrNi cast steels in centrifugal and mouldcast parts	C	Si	Mn	Cr	Ni	Nb	Ti	Fe	
		0.4	1	1.5	25	35	1.2	0.1	Bal.	
UTP 3545 Nb	Basic-coated special stick electrode for high-temperature cast alloys with high carbon content in the petrochemical industry	C	Si	Mn	Cr	Ni	Nb	Fe		
		0.45	1	0.8	35	45	0.9	Bal.		
UTP 6225 Al	Basic coated stick electrode for repair welding on high heat resistant nickel-based steels as well as high Ni-containing cast alloys.	C	Si	Mn	Cr	Ni	Ti	Fe	Al	
		0.2	0,6	0.1	25	Bal.	0.1	10	1.8	
UTP 6170 Co	Nickel-based stick electrode for repair welding on high-temperature-resistant and similar alloys, as well as for creep resistant austenitic alloys and cast alloys	C	Si	Mn	Cr	Mo	Ni	Co	Al	
		0.06	0.7	0.1	21.0	9.0	Bal.	11.0	0.7	

5.18.5 Special applications – Joining & Repair – Gouging

Product name	Short description	Chemical composition (typical values) in %								
UTP 82 Ko	Carbon electrode for gouging and cutting									
UTP 82 AS	Thick coated stick electrode for gouging and chamfering on all steel grades with ferritic and austenitic structure, as well as cast iron									

5.18.6 Special applications – Joining & Repair – Underwater

Product name	Short description	Chemical composition (typical values) in %								
UTP Nautica 20	Coated stick electrode for welding in wet environments and for underwater welds up to 20 m water depth	C	Si	Mn	Mo					
		0.1	0,3	0.6	0.5					
UTP Nautica Cut	Coated stick electrode for cutting or chamfering in wet environments and underwater

5.23 Metal powders

5.23.1 Flame-spraying powders for simultaneous melting

Product name	Short description	Grain size range	Chemical composition (typical values) in %					
SIMmelt™ NiBas20G	Repairs of glass moulds in general, allowing - thanks to its moderate hardness - an excellent machinability	-106 µm + 20 µm	C	Si	Ni	Cr	Cu	B
			0.03	2.0	Bal.	0.2	5.0	0.6
SIMmelt™ NiBas30G	Protection and repairing of glass moulds; NiCrBSi with addition of fluxing elements	-106 µm + 20 µm	C	Si	Ni	Cr	Mo	Fe
			0.1	2.5	Bal.	2.7	1.5	0.2
SIMmelt™ NiBas40	Good resistance to corrosion and wear even at high operating temperatures; drawing dies, forging dies, tools in the plastics industry, ejector pins	- 106 µm + 20 µm	C	Si	Ni	Cr	B	Fe
			0.25	3.5	Bal.	7.5	1.8	2.5
SIMmelt™ NiBas60	Good resistance to corrosion and wear even at high operating temperatures; pump rings, friction bearing surfaces, knife edges, press moulds	- 106 µm + 20 µm	C	Si	Ni	Cr	Fe	B
			0.75	4.5	Bal.	15.0	3.5	3.2
SIMmelt™ NiBasW35	High level of protection against abrasive wear; slicing machine blades, conveyor chains, kneader parts	- 106 µm + 20 µm	NiCrBSi Matrix					
			65 %					
SIMmelt™ NiBasW55	Highest abrasion resistance; mixer-settler parts and kneaders in the ceramics industry, die drawing tools, chopping blades, scrapers	- 106 µm + 20 µm	NiCrCoFeBSi Matrix					
			45 %					
SIMmelt™ NiBasW60	Highest abrasion resistance; well suitable for automated spraying processes; separator screws, mixing shovels	- 150 µm + 20 µm	NiCrCoFeBSi Matrix					
			40 %					

5.23.2 Flame-spraying powders for subsequent melting

Product name	Short description	Grain size range	Chemical composition (typical values) in %					
SUBmelt™ NiBasW35	High abrasion resistance; stirrers, mixer blades, mould edges, extruder screws	-125 µm + 45 µm	NiCrBSi Matrix					
			65%					
SUBmelt™ NiBasW50	For stirrer, mixing and fan blades, conveyer screw edges and parts subjected to abrasive wear	-125 µm + 45 µm	NiCrBSi Matrix					
			50%					
SUBmelt™ NiBas60	Highest abrasion resistance; stirrer, mixing shovels, screw shafts, for automatic spray processes	-125 µm + 45 µm	C	Si	Cr	B	Fe	
			0.75	4.4	15.0	3.2	3.5

5.23.3 Flame-spraying powders without melting (cold process)

Product name	Short description	Grain size range	Chemical composition (typical values) in %				
COLDmelt™ CuAl	Good sliding and emergency running properties; rollers, bearing journals, slideways	- 120 µm + 36 µm	Cu	Al			
			Bal.	10.0			
COLDmelt™ Base17	Bond coat, base powder for initial layer under further coats of wear resistant CrNi- and Cu-alloys	- 106 µm + 36 µm	Al	Ni			
			5.0	Bal.			
COLDmelt™ Zn	Active corrosion protection on steel under atmospheric stresses	- 125 µm	Zn				
			> 99.5				

5.23.4 Metal powders for PTA and laser surfacing – WEAR protection – Steels difficult to weld

Product name	Short description	Grain size range	Chemical composition (typical values) in %				
PLASweld™ Ledurit60	Highly wear-resistant, preferred for protection against mineral wear with low impact; feed screws, excavator teeth	-200 + 63 µm in 5 kg powder containers	C	Si	Mn	Cr	Fe
			4.1	0.5	0.8	32.0	Bal.
PLASweld™ FerroV1	Due to its high hardness the powder for laser surfacing is suitable for build-ups on machine parts and tools subject to abrasion, compression and impact	-125 + 45 µm in 5 kg powder containers	C	Si	Mn	Cr	Mo
			0.5	0.3	0.2	4.5	2.8
PLASweld™ FerroV15	Ferrous powder alloy for plasma arc surfacing with high Vanadium and Chromium content against a combination of wear and corrosion. Cutting tools, scraper	-180 + 63 µm in 5 kg powder containers	C	Si	Mn	Cr	Mo
			4.4	1.2	1.1	13.1	1.1
PLASweld™ NiBasW60	The powder blend for plasma arc surfacing, specially nickel base matrix for highest abrasion stress, for excavator parts, drilling tools, screws in the plastic industry and mining.	-180 + 63 µm in 5 kg powder containers	C	Si	Ni	W	Fe
			2.2	1.3	37.5	Bal.	0.5
PLASweld™ NiBas776W40	NiCrMo-powder with addition of tungsten carbides for PTA welding and laser surfacing, hardfacing weld overlays subject to corrosion and abrasive wear	-150 + 50 µm in 5 kg powder containers	C	Si	Mn	Ni	Cr
			1.6	0.4	0.7	Bal.	9.0
PLASweld™ NiBasW15S	Special wear resistant NiCrBSiW- powder for PTA welding and laser surfacing - tungsten is an alloying element, not added as tungsten carbide in a blend.	-150 + 50 µm in 5 kg powder containers	C	Si	Ni	Cr	W
			0.8	4.1	Bal.	15.0	15.5

5.23.5 Metal powders for PTA and laser surfacing – WEAR protection – Cobalt alloys

Product name	Short description	Grain size range	Chemical composition (typical values) in %				
PLASweld™ Celsit706	Cobalt-base alloy for plasma- transferred-arc (PTA) welding	-150 + 50 µm in 5 kg powder containers	C	Si	Ni	Cr	W
			1.0	1.0	2.0	29.0	4.0

6.1 Welding processes

6.1.1 Covered electrodes – Description of the SMAW process

SMAW = Shielded Metal Arc Welding

Shielded metal arc welding is one of the oldest and most versatile welding methods and is considered to be both simple and reliable.

In this technique an electric arc is struck between a covered electrode and the workpiece. The electrode acts both as the carrier of electric current and as the welding consumable that will be melted. The electrode is melted in the high temperature of the arc and transfers to the weld pool in the form of drops. As this happens gases that stabilise the arc and shield the weld pool from oxidation and slag that floats on the weld pool as protective layer are formed.

This fulfils a number of functions: it protects both against the influence of the surrounding atmosphere (primarily oxidation) binds contamination and reduces stresses by slowing the rate at which the weld pool cools down. A wide range of different electrodes for shielded metal arc welding are available. Their alloying elements allow the strength and toughness of the weld seam to be accurately controlled. It is mainly used in steel construction and pipeline construction as well as for work in the open air and on assembly jobs since the necessary equipment is compact and can easily be transported.

6.1.2 TIG rods – Description of the GTAW process

GTAW = Gas Tungsten Arc Welding / TIG = Tungsten-Inert-Gas

In TIG welding an electric arc is struck between a tungsten electrode which does not melt away and the workpiece (contact or high-frequency ignition).

If a welding consumable is needed it is supplied as a cold wire and is melted in the arc in front of the molten pool. The electrode the arc and the molten pool are protected from the effects of the atmosphere by an inert shielding gas – argon is usually used or more rarely the relatively expensive helium or a mixture of gases. The welding equipment consists of a source of electrical current (DC or AC) and a welding torch connected through a hose assembly. This assembly contains the cable for the welding current the supply of shielding gas the control line and in larger equipment a feed and return line for cooling water.

The decoupling of the supply of electricity from the welding consumables which is typical for TIG welding allows highly individual adjustment of the parameters so leading to very clean high-quality welded joints for root passes and position welding. There is hardly any splatter and only a little welding fume in addition to which lack of fusion undercuts and pores are easily avoided. TIG welding is therefore used wherever weld seams of particularly high quality are needed such as in the construction of pipelines and apparatus power station building aerospace engineering and in the chemical and food industries. The TIG technique can be applied manually or mechanically (whether semi or fully automatic) and can be used to process any metal that is suitable for welding.

6.1.3 Solid wires – Description of the GMAW process

GMAW = Gas Metal Arc Welding

Metal shielding gas welding is an economic welding procedure which is well-suited to uniform welding sequences.

The weld metal demonstrates good properties and the method features high productivity whether applied manually or automatically.

The arc burns between the welding wire and the workpiece in gas shielded metal arc welding. The solid wire is automatically fed through the centre of the welding torch. The shielding gas is also passed through the welding torch and encloses the weld pool during the welding process. The weld seam is therefore shielded from the surroundings. The gases used in MAG welding are active. Carbon dioxide or a gas mixture is used. In practice MAG welding under a mixture of gases has prevailed as it has a lower tendency to spatter and a higher deposition rate than welding using 100 % carbon dioxide.

In MIG welding inert gases such as argon helium and their mixtures are used. These shielding gases do not react with either the base materials or the welding consumables.

The MSG method can be used with a wide range of materials welding position and degrees of mechanisation. It permits welding with a manually held torch as well as fully automated robot methods. The deposition rate is very high and productivity is high too.

a. 3Dprint solid wires for WAAM

With the manufacturing of wires which are tailor-made to its specific purpose voestalpine Böhler Welding is creating the basis for innovative Wire Arc Additive Manufacturing.

The metallurgical and application know-how of its materials specialists makes the company a central element in this technological revolution.

6.1.4 Gas-shielded flux-cored wires – Description of the FCAW process

FCAW = Flux-cored Arc Welding

Flux-cored arc welding is a flexible method that offers high deposition rates good weldability and excellent weld appearance.

FCAW is a semiautomatic or automatic arc welding process commonly used to join or surfacing steel base materials. FCAW is recommended for welding thicker sections (> 5 mm). The high deposition rate also makes it suitable for overlay welding of mild and low-alloy steel components. The filler metal is a tubular wire filled with alloying elements that provide beneficial welding characteristics. When such filling is composed by metallic powders the wire is called metal cored; when it is composed by mineral oxides raw materials, the wire is called flux cored (Rutile or Basic).

Flux Cored Arc Welding is closely related to Gas Metal-Arc Welding (GMAW): the cored wire is automatically fed through the center of the gun using the same equipment. The shielding gas is supplied through the gun and protects the weld pool from oxidation during welding. The flux inside the wire will protect the weld from the atmosphere since it forms a slag which covers the weld. The shielding gas that covers the welding arc area could be composed by different gas mixtures such as Argon/CO₂ or pure CO₂.

Argon/CO₂ improve the arc stability during welding with fine droplet metal transfer. Pure CO₂ increases the size of the metal transfer droplet with a more unstable arc but increases the performance in terms of base metal penetration and it is also a cheaper shielding gas.

Flux Cored Arc Welding is a multi-positional process that makes it suitable for many different applications and it is one of the most preferable and profitable welding processes.

6.1.5 Self shielded flux-cored wires – Description of the FCAW-S process

FCAW-S = Self-shielded Flux cored wires

Easy to operate this welding process guarantees high deposition rates and a good recovery of elements across the arc. Open Arc welding allows the user to get a wide range of alloys and to customize these easily.

6.1.6 Submerged arc – Description of the SAW process

SAW = Submerged Arc Welding

Submerged arc welding is an arc welding process in which the arc burns between an electrode (wire or strip) and the workpiece. The special feature of this method is that the arc burns out of sight in a cavity filled with gases and vapours under a layer of coarse-grained mineral welding flux.

The welding flux melts in the arc forming a liquid slag that floats on the molten pool so protecting it from the effects of the atmosphere (like the shielding gas in gas shielded arc welding). The welding electrode whether wire or strip is supplied by an automatic feed system while the welding flux is supplied from a reservoir or through a compressed air feed system. The welding current flows via a contact tube to the electrode immediately above the welding area. This has several advantages including high current carrying capacity high deposition rate and a wide range of possible variations of the welding parameters. The flux coating moreover results in high thermal efficiency and submerged arc welding is therefore known as a high-efficiency process. Turning to detail there is a distinction in submerged arc welding between single-wire welding double-wire welding tandem welding and strip welding.

The composition of the weld metal can be influenced through the right selection of the electrode and flux combination since chemical reactions between the melt and the slag can control the burn-off and pick-up of alloying elements. The method generates very few emissions and creates spatter-free seams of high quality.

It is a fully automated welding procedure carried out for instance using welding gantries booms motorised axis systems or carriages most often for welding long seams in an industrial context. The method is often employed in shipbuilding container manufacture bridge building and steel construction. The method can be applied for joint welding and for build-up welding for instance for wear or corrosion protection layers.

a. Solid wires

b. Flux-cored wires

c. Flux

6.1.7 Description of the SASC / ESSC process

a. Submerged Arc Strip Cladding (SASC) process description

Submerged Arc Strip Cladding (SASC) is a fusion process producing an electric arc between a strip electrode and the workpiece. Electric arc is covered by a blanket of granular flux. The arc is maintained in a cavity surrounded by molten flux, which refines the weld deposit and protects it from atmospheric contamination.

SASC Main benefits are:

- » Arc flashes are virtually eliminated by flux blanket
- » No spatter and fume make attractive from healthy & environmental standpoints
- » Fully automatic operation requires minimal welder training
- » High deposition rate
- » Low cost per square meter of weld overlay
- » ISO standard reference number for Submerged arc welding with strip electrode: ISO 4063 - 122

b. Electro Slag Strip Cladding (ESSC) process description

ElectroSlag Strip Cladding (ESSC) is a fusion process using heat generated into a layer of electroconductive slag producing coalescence which melts the strip electrode and the surface of the workpiece.

The electroconductive slag is maintained in a molten condition by Joule's effect produced by ohmic resistance to electric current driven by the strip electrode.

During the process, granular flux is added continuously to maintain an adequate slag covering over the molten weldpool. In operation with a constant potential power source, the strip electrode melts off while dipping only partly through the molten slag bath.

ESSC Main benefits, in addition to SASC, are:

- » Very low penetration and dilution down to 8% typical.
- » Single layer weld overlay with dilution compensated strip electrodes or/and granulated fluxes
- » Highest deposition rate up to 1.5m² per hour with 90mm wide strip electrode
- » High productivity with cladding speed up to 450mm per minute
- » Low flux consumption, fused flux to melted strip electrode ratio down to 0.5
- » ISO standard reference number for Electroslag welding with strip electrode: ISO 4063 – 721

6.1.8 Metal powders – Description of the thermal spraying process

Thermal spraying process

- ① Acetylene / Oxygen
- ② Powder container
- ③ Burner nozzle
- ④ Conveying gas / Powder
- ⑤ Acetylene / Oxygen – Flame and spray particles
- ⑥ Workpiece

In powder flame spraying the spray material in powder form is melted with an oxy-fuel gas flame accelerated towards a component by the combustion gases and sprayed on to the surface of the component. Metallic oxide ceramic carbide and plastic powders can be processed using spray guns specifically designed for those materials.

Spray guns that frequently take the form of manual torches preferably using acetylene as a fuel gas because of its high flame temperature are chosen for metallic alloys based on nickel iron or cobalt. The powder particles which are partially melted by the flame deform on impact with the surface of the component and are deposited there to form a spray coating with a lamellar structure. The main areas of application for thermal coatings are corrosion protection and wear protection.

6.1.9 Arc spraying cored wires – Description of the arc spraying with flux-cored wires process

Arc spraying cored wires

Arc Spraying is the highest productivity thermal spraying process. A DC electric arc is struck between two continuous consumable wire electrodes that form the spray material.

Compressed gas [usually air] atomizes the molten spray material into fine droplets and propels them towards the substrate. The process is simple to operate and can be used either manually or in an automated manner.

6.1.10 Plasma transferred arc surfacing (PTA)

Plasma transferred arc surfacing (PTA)

- ① Cathode holding device
- ② Plasma gas
- ③ Cathode
- ④ Water cooling
- ⑤ Shielding gas
- ⑥ Feeding gas and powder
- ⑦ Workpiece

In contrast to the spraying processes, this method is a welding process and so involves metallurgical bonding of the applied material to the base material.

However, if the parameters are set optimally, the degree to which it blends with the base material can be reduced to a minimum. The PTA process is employed primarily for surfacing of wear resistant and corrosion resistant coatings on to a base material. The process is characterized by the use of two separately controllable electric arcs. One of these is the (non-transferred) pilot arc; this arc is formed between the non-melting (tungsten) electrode and the (copper) plasma nozzle. It accelerates the plasma gas and enables ignition of the (transferred) main arc. This arc burns with a high energy density between the electrode and the workpiece. With the aid of the electric arc, both the base material and the metal powder that serves as the welding consumable are fused together, which then gives rise to the deposited protective coating. Ar, H₂, He, or mixtures of gas are employed as a processing gas. This serves, firstly, as a plasma gas and, secondly, as a shielding gas and as a carrier gas for the powder. Because of its high degree of automation, the PTA process is clearly most suitable for series parts and offers advantages here with regard to:

- » High reproducibility
- » Low degree of dilution with base material
- » Small concentrated heat-affected zone
- » High surfacing rates possible
- » Alloy multiplicity in powder form
- » Material combinations with hard substances

UTP offers these PTA powders as nickel-based, cobalt-based and iron-based alloys. The powders are designated PLASweld™ in keeping with the process for which they are intended. The grain sizes should be chosen according to the type of system; powder grain sizes between 150 and 210 µm are selected for the standard range of PTA.

6.1.11 Laser powder surfacing

Laser powder surfacing

Another method of using metal powder as a welding consumable is provided by laser powder surfacing. Here, a laser serves as the source of heat for partially melting the surface of the workpiece and fusing the welding consumable in powder form. The high-energy focus of the laser allows precisely targeted surfacing, which makes it possible to provide wear protection at specific places without negatively affecting (e.g. through a high heat input) the properties of the rest of the component. Because the coating thicknesses are usually small and the processing times short for laser powder surfacing, PLASweld™ powder of a finer grain size, typically 45-106 µm, can be used here.

B300	Basket rim B300		 1 spool / box
	Adapter B300 spool		
Plastic spools (acc. EN ISO 544)			
S100	Plastic spool S100		10 spools / box
S200	Plastic spool S200		 3 spools / box
S300	Plastic spool S300		 1 spool / box

Rods

Description	Dimension	Tube	Packaging
Tubes / Carton	Tube: Radius: 40 mm Länge: 1005 mm Carton: 183 x 46 x 1020 mm		 4 tubes / box

SAW drums

Description	Dimension	Drum
SAWdrum	Ø 570 x 970 mm	

Spools

Description	Dimension	Spool	Packaging
Basket rim B415			 1 spool / box
Large spools for SAW / MIG / TIG			
Metal spool S760S			
Wooden spool S760W			

Strip electrodes on coils

Width	Thickness	Weight	inner Diameter	outer Diameter	Number of coils per pallets 1100x1100	
30 mm	0.5 mm	25 - 30 kg	300 mm	550 mm	32	
60 mm	0.5 mm	50 - 60 kg			16	
90 mm	0.5 mm	75 - 90 kg			12	

Tailor strip electrode sizes and coil weights are available on demand

Spiders

Description	Dimension	Spool / Packaging
BASEspider		
	max. 400kg	
MEGAspider		
	max. 1000 kg	

Coils

Description	Dimension	Spool / Packaging
Coil C760		
	Weight = 100 kg $AA^* / A = 770 \text{ mm} / I = 570 \text{ mm} / B = 100 \text{ mm}$ * auf Anfrage	
Coil	Cardboard tube: 1150 x 500 mm	

6.2.2 Flux

Flux – DRY SYSTEM

Description	Packaging	Pallet
DRY SYSTEM bag 25 kg		EUP: 24 bags /pallet CP1BOX: 40 bags /pallet
PAPER bag 25 kg		for UTP WEAR protection SAW fluxes

BIG BAGs

Description	Dimension	Packaging
DRY SYSTEM BIGBAG 500 kg	85 cm x 85 cm x 70 cm	
DRY SYSTEM BIGBAG 1000 kg	85 cm x 85 cm x 125 cm	

Buckets / Drums

Description	Packaging
Steel bucket 25kg with lid	
Bucket 30 kg	
Steel barrel 200 kg	

6.2.3 Stick electrodes

Description	Packaging	Outer packaging
DRY SYSTEM 15 DRY SYSTEM 20 DRY SYSTEM 30	 ~ 0,8 - 2,5 kg per box	 DRY SYSTEM 15: 13 / box DRY SYSTEM 20: 12 / box DRY SYSTEM 30: 8 / box
Tin 99	 ~ 9 kg per tin	 2 tins / box
Tin 73	 ~ 4,5 kg per tin	 3 tins / box
Box	 ~4,5 kg per box	 4 boxes / outer box
PocketBox 20 PocketBox 30	 1,0 / 2,0 kg per box	 12/8 boxes / outer box

6.3 Handling and storage recommendations

General recommendations

Böhler Welding filler and cladding materials and fluxes will keep their promised performance and properties when being stored properly under the described conditions. For storage conditions or periods deviating from recommended, a visual control and a welding test can verify the functionality. Depending on the type and individual properties of the material longer storage periods can be accepted. The start date of the storage period is the date where the consumables arrive at the ordering company. The storage management should follow the first in first out principle to avoid over-aging.

Basic guide lines

- » Welding consumables should be kept in their undamaged original packaging.
- » The storage environment must be dry, clean, and free of dust.
- » No direct exposure to sunlight.
- » No direct contact of the packaging with walls and floor.
- » Welding consumables must be stored frost free.
- » Temperature drops below the dew point should be avoided.

Recommended storage conditions

Temperature	Relative humidity
5-15 °C	< 50 % RH
18-25 °C	< 60 % RH
25-35 °C	< 40 % RH
> 35 °C	< 30 % RH

These recommendations do not release the user from his duty to convince himself of the proper condition of the welding consumables before use.

Covered electrodes

Quality packaging

Depending on the type of electrode and the application, stick electrodes need to be protected against moisture pick up from the atmosphere. The electrodes need to be stored in a dry room in their undamaged original packaging.

Covered electrodes can be stored in their undamaged and unopened original packaging for 2 years following the recommended storage conditions above. The preferred condition is: 18-25 °C at < 60 % RH.

Covered electrodes in opened, broken or damaged packaging must be stored in a separate, heated room at higher temperatures. The re-drying time and temperature before use depends on type, kind of packaging and application. Individual information is provided on the electrode package.

Stick electrodes where no re-drying recommendation is given can be dried at 100 - 120 °C / 1 h.
Cellulosic electrodes must not be re-dried.
Electrodes exposed directly to water, oil or grease must not be used.

General recommendations for re-drying of stick electrodes:

Classification EN ISO	Application	Type	Re-drying	Temperature (°C)	Time (h)
2560	Non and low alloyed	A, RA, C, RC, R, RR, RB B	no yes	– 250-350	– 2-10
18275	High tensile steel	B	yes	300-350	2-10
3580	Creep resistant steel	R B	no yes	– 300-350	– 2-10
3581	Stainless steel	R B	yes no	250-300 –	2-10 –
	(soft-) martensitic and heat resistant ferritic steel	B, R	yes	300-350	2-10
14172	Ni and Ni-alloys	R, B	yes	250-300	2-10

Deviations from these recommendations are possible and provided on the individual product packaging.

In case of hydrogen content in weld metal of < 5 ml / 100 g weld deposit, re-drying at 350 °C / 2 h is necessary.

Before re-drying, the electrodes should be removed from the packages with the appropriate care and laid in the preheated (80° - 100° C) baking oven. The stacked height of the electrodes in the oven should not exceed 50 mm.

The electrodes should stay for at least 2 h in the oven after reaching the required re-drying temperature. Before taking the electrodes out let them cool down in the opened oven to 70° - 90 °C. After re-drying they can be kept in a drying cabinet at 120° - 200°C up to four weeks or in a quiver at 100° - 200°C for up to 8 hours.

DRY SYSTEM premium packaging – Ready-to-use covered electrodes

From the advanced Böhler Welding metal Can or the premium DRY SYSTEM vacuum pack, covered electrodes can be welded without re-drying. Using our special moisture resistant coated electrodes is possible up to 9 hours after opening. See detailed information on the label. DRY SYSTEM offers different packaging sizes matching the average consumption of one shift. Unused electrodes can be stored and re-dried as described before. DRY SYSTEM offers simple and save handling of covered electrodes under workshop and construction site conditions. Dry and optimal conditioned electrodes are available at all time.

Covered electrodes from the Böhler Welding DRY SYSTEM premium vacuum pack or the advanced metal Can have a nearly unlimited shelf live as long as the packs are neither opened nor damaged.

Flux for joining and cladding

Fluxes for joining and cladding can be stored in their undamaged and unopened original packaging for 2 years following the recommended storage conditions above. The preferred condition is: 18-25 °C at < 60 % RH.

Flux from damaged packs must be used or repacked immediately.

Basic fluxes need to be re-dried before use to avoid the risk of cold cracking when coming in standard packaging (Plastic bag, paper bag with plastic liner, standard Big Bag).

Re-drying of agglomerated fluxes is generally done at 300-350 °C for 2-4 hours or for FB types for two hours at 350-450 °C to ensure the H4 resp. H5 classification.

General recommendations for re-drying of agglomerated fluxes:

Typ	Re-drying	Temperature (°C)	Time (h)
FB	Y	300-350 (450)	2-10
AB	Y	300-350	2-10
AR	Y	150-200	2-10

Detailed re-drying recommendations are displayed on the product packaging.

The construction of the re-drying oven should avoid local over heating by means of a dry blend screw and ensure good ventilation. When applying static drying the height of the flux is restricted to 50 mm. The flux may be re-dried several times; we recommend a maximum cumulative holding time within a temperature range of 300-350 °C of approximately 10 hours. After re-drying, unused flux can be stored up to 30 days at a temperature of about 150 °C.

When working at higher temperatures > 30 °C and rel. humidity > 80 % it is recommended to maintain the flux at a temperature of 110-150 °C.

In a well-designed flux re-circulation system characterized by low flux travel speeds, no sharp bends and minimized flux travel distances, the flux can be re-circulated several times without damaging the agglomerate. A central flux hopper should be re-filled with fresh or re-dried flux when approximately 50 % of the content is consumed.

Fine particles or dust formed during re-circulation should be limited to 5 % with a grain size of < 200 µm by using dust filters.

The re-circulated flux must be kept free of all foreign particles such as welding slag, rust, plate scale or grinding dust.

The compressed air used in any sucking or re-circulation system shall be clean and dry. Devices such as a frost condensation driers and oil traps should be used.

DRY SYSTEM premium packaging – Ready-to-use fluxes

Flux from the advanced Böhler Welding metal bucket or the premium DRY SYSTEM Bag or BigBag can be used right away without re-drying. The particular characteristic of the DRY SYSTEM packaging reliably prevents moisture pick up of the flux during transport and storage.

Böhler Welding flux for joining and cladding in unopened and an undamaged metal bucket, DRY SYSTEM Bag or DRY SYSTEM BigBag can be stored for longer periods than two years.

Cored wires

Flux cored wires can be stored in their undamaged and unopened original packaging for 2 years following the recommended storage conditions above, independent of the type as seamless or folded cored wire. The preferred condition is: 18 - 25 °C at < 60 % RH.

At storage temperatures below 10 °C there is a risk of condense forming on the wire surface when being opened and unpacked in a warmer environment. This can lead to porosity and gas marks at the beginning of the weldment. Acclimatized wires and rods should be used, only. After finishing welding broken spools should be removed from the welding machine and stored in the original packaging at a dry place.

Redrying of cored wires is not necessary and is not recommended in general.

Solid wires and rods

Solid wires and rods can be stored in their undamaged and unopened original packaging for 2 years following the recommended storage conditions above. The preferred condition is: 18 - 25 °C at < 60 % RH. For stainless steel products longer storage times do normally not lead to restrictions in their properties.

At storage temperatures below 10 °C there is a risk of condense forming on the wire surface when being opened and unpacked in heated environment. This can lead to porosity and gas marks at the beginning of the weldment. Acclimatized wires and rods should be used, only. After finishing welding broken spools should be removed from the welding machine and stored in the original packaging at a dry place.

Aluminium wires and rods

During transport and storage of aluminum alloys conditions leading to condensation of air humidity on the surface must be avoided to minimize the risk of hydrogen diffusing into the oxide skin as main source for porosity during welding.

Prior to welding aluminium welding consumables should be stored in their unopened original packaging in the welding area for 24 hours before use to enable a temperature relieve and avoid condensation.

Aluminium welding wires must be stored in a dry room with constant temperature in their unopened and undamaged original packaging. High humidity, air flow and quick temperature changes must be avoided.

Aluminium wires and rods can be stored up to two years under these conditions if the original packaging is unopened and not damaged.

Opened material is to be stored in the re-closed original packaging and must be kept away from each kind of contamination, contact with other metals, temperature and humidity changes. Under these conditions the material can be stored up to one year.

6.4 Welding consumables standards according to European standards

In order to maintain an overview of the various welding consumables, they are summarized in standards. The following pages provide a clear description of how the EN ISO standard is structured, can be read and to be understood. For easy understanding, the system is explained by giving examples.

6.4.1 Summary of EN / EN ISO standards for welding consumables

Standard	Title of the standard
EN ISO 636	Rods, wires and deposits for tungsten inert gas welding of non-alloy and fine-grain steels.
EN ISO 2560	Covered electrodes for manual metal arc welding of non-alloy and fine grain steels.
EN ISO 3580	Covered electrodes for manual metal arc welding of creep-resisting steels.
EN ISO 3581	Covered electrodes for manual metal arc welding of stainless and heat-resisting steels.
EN ISO 1071	Welding consumables - Covered electrodes, wires, rods and tubular cored electrodes for fusion welding of cast iron - Classification
EN ISO 12153	Tubular cored electrodes for gas shielded and non-gas shielded metal arc welding of nickel and nickel alloys.
EN 12536	Rods for gas welding of non alloy and creep-resisting steels.
EN ISO 14171	Solid wire electrodes, tubular cored electrodes and electrode/flux combinations for submerged arc welding of non alloy and fine grain steels.
EN ISO 14172	Covered electrodes for manual metal arc welding of nickel and nickel alloys.
EN ISO 14174	Fluxes for submerged arc welding and electroslag welding.
EN ISO 14175	Gases and gas mixtures for fusion welding and allied processes
EN ISO 14341	Wire electrodes and weld deposits for gas shielded metal arc welding of non alloy and fine grain steels.
EN ISO 14343	Wire electrodes, strip electrodes, wires and rods for arc welding of stainless and heat resisting steels.
EN 14700	Welding consumables - Welding consumables for hardfacing
EN ISO 16834	Wire electrodes, wires, rods and deposits for gas shielded arc welding of high strength steels.
EN ISO 17632	Tubular cored electrodes for gas shielded and non-gas shielded metal arc welding of non-alloy and fine grain steels.
EN ISO 17633	Tubular cored electrodes and rods for gas shielded and non-gas shielded metal arc welding of stainless and heat-resisting steels.
EN ISO 17634	Tubular cored electrodes for gas shielded metal arc welding of creep-resisting steels.
EN ISO 17777	Covered electrodes for manual metal arc welding of copper and copper alloys - Classification
EN ISO 18274	Solid wire electrodes, solid strip electrodes, solid wires and solid rods for fusion welding of nickel and nickel alloys.
EN ISO 18275	Covered electrodes for manual metal arc welding of high-strength steels.
EN ISO 18276	Tubular cored electrodes for gas-shielded and non-gas-shielded metal arc welding of high-strength steels.
EN ISO 21952	Wire electrodes, wires, rods and deposits for gas shielded arc welding of creep-resisting steels.
EN ISO 24034	Solid wire electrodes, solid wires and rods for fusion welding of titanium and titanium alloys.
EN ISO 24373	Solid wires and rods for fusion welding of copper and copper alloys.
EN ISO 24598	Solid wire electrodes, tubular cored electrodes and electrode-flux combinations for submerged arc welding of creep-resisting steels.
EN ISO 26304	Solid wire electrodes, tubular cored electrodes and electrode-flux combinations for submerged arc welding of high strength steels.

6.4.2 Abbreviations for welding consumables classification A in EN ISO standards

Abbreviation	Description	EN ISO standards concerned		
Abbreviation for welding process / product				
A	Agglomerated flux	14174		
B	Solid strip electrodes	14343, 18274, 24373		
C	Sintered strip electrodes	14700		
E	Manual metal arc welding	2560,3580,3581,14172,18275, 1071, 14700, 17777		
ES	Electroslag process	14174		
G	Gas shielded metal arc welding with solid wire electrodes	14341, 14343, 21952, 16834		
W	Tungsten inert gas welding	636, 14343, 16834, 21952, 14700		
T	Gas shielded metal arc welding with flux cored wires	12153, 17632, 17633, 17634, 18276, 1071, 14700		
S (S/T)	Submerged arc welding (solid/flux cored wire)	14171, 14343, 24598, 26304		
O	Gas welding	12536		
P	Plasma welding	14341		
S	Solid wire	14343, 18274, 1071, 14700		
Abbreviation for stress-relieved condition				
T	Mechanical properties after annealing	16834, 18275		
P	560-600°C / 1h / furnace up to 300°C / air	26304		
	Mechanical properties in the welded condition	all		
Abbreviation for shielding gases				
M	Shielding gas EN ISO 14175-M2, but without helium	17632, 17634, 18276		
C	Shielding gas EN ISO 14175-C1, carbon dioxide			
e.g. M21	The abbreviation for the shielding gas must be accordance with EN ISO 14175	12153, 14341, 16834, 17633		
Z	No shielding gas specified	14341, 16834, 17633		
N	No shielding gas	17632, 18276		
NO	No shielding gas	12153, 17633		
Abbreviation for covering type				
A	acid covering	2560		
C	cellulosic covering			
R	rutile covering	2560, 3580, 3581		
RR	rutile thick covering	2560		
RC	rutile-cellulosic covering			
RA	rutile-acid covering			
RB	rutile-basic covering			
B	basic covering	2560, 3580, 3581, 18275		
Abbreviation for flux type				
AB	aluminate basic	CS	calcium-silicate	14174, 14171, 18274, 26304, 24598
AS	aluminate-silicate	FB	fluoride basic	
AF	aluminate-fluoride basic	MS	manganese-silicate	
AR	aluminate-rutile	RS	rutile-silicate	
BA	basic-aluminate	ZS	zirconium-silicate	
CG	calcium-magnesium	Z	any other composition	

6.5 Certificates of Conformity and other certificates

General notes

If wanted, factory certificates or acceptance test certificates according to EN 10204 can be prepared for each delivery. Test Reports according to AWS A5.01 can also be supplied. Whatever the type of certification, it must always be requested at the time of order. It is essential that the extent of testing is stated for EN 10204-3.1 acceptance test certificates and for Test Reports. The subsequent preparation of a 3.1 Certificate or a Test Report with a testing scope that differs from schedules F and H is always associated with increased administration and increased costs. If a production series has already been entirely processed, it is not possible to prepare retrospective certificates.

Factory certificates according to EN 10204-2.2

With this certificate the manufacturer confirms that the delivered products correlate with the requirements of the order, including results of different not specified tests.

Acceptance test certificates according to EN 10204-3.1 and 3.2

3.1 or 3.2 acceptance tests certificates are also prepared if required. For this purpose, tests must be carried out on the delivery or on the manufacturing unit associated with the delivery. Since this involves certification of a delivery-specific test according to the requirements of the customer, it is essential that the extent of testing is made known at the time of the order, or at the initial enquiry stage. The resulting costs will be charged according to expenditure.

Test reports according to AWS A5.01

If certification of conformity of the product with the AWS (American Welding Society) is required for a customer project, a Test Report should be requested. The Test Report contains, as standard, a confirmation of conformity for correspondence with the applicable AWS standard, or with the reference to this AWS standard contained in ASME II, Part C. If no further elements are specified by the customer, the Test Report corresponds to "Schedule F" of the AWS A5.01. The content of this Test Report is comparable to that of a "2.2" factory certificate.

The necessary testing scope must be made known at the time of order for all other schedules. In this case, charging will be according to expenditure.

6.6 Classification of shielding gases according to EN ISO 14175

Symbol		Components in volume percent (nominal)					
Main group	Sub group	oxidising		inert		reducing	inert
		CO ₂	O ₂	Ar	He	H ₂	N ₂
I	1			100			
	2				100		
	3			Residue	0,5 ≤ He ≤ 95		
M1	1	0,5 ≤ CO ₂ ≤ 5		Residue*		0,5 ≤ H ₂ ≤ 5	
	2	0,5 ≤ CO ₂ ≤ 5		Residue*			
	3		0,5 ≤ O ₂ ≤ 3	Residue*			
	4	0,5 ≤ CO ₂ ≤ 5	0,5 ≤ O ₂ ≤ 3	Residue*			
M2	0	5 ≤ CO ₂ ≤ 15		Residue*			
	1	15 ≤ CO ₂ ≤ 25		Residue*			
	2		3 ≤ O ₂ ≤ 10	Residue*			
	3	0,5 ≤ CO ₂ ≤ 5	3 ≤ O ₂ ≤ 10	Residue*			
	4	5 ≤ CO ₂ ≤ 15	0,5 ≤ O ₂ ≤ 3	Residue*			
	5	5 ≤ CO ₂ ≤ 15	3 ≤ O ₂ ≤ 10	Residue*			
	6	15 ≤ CO ₂ ≤ 25	0,5 ≤ O ₂ ≤ 3	Residue*			
	7	15 ≤ CO ₂ ≤ 25	3 ≤ O ₂ ≤ 10	Residue*			
M3	1	25 ≤ CO ₂ ≤ 50		Residue*			
	2		10 ≤ O ₂ ≤ 15	Residue*			
	3	25 ≤ CO ₂ ≤ 50	2 ≤ O ₂ ≤ 10	Residue*			
	4	5 ≤ CO ₂ ≤ 25	10 ≤ O ₂ ≤ 15	Residue*			
	5	25 ≤ CO ₂ ≤ 50	10 ≤ O ₂ ≤ 15	Residue*			
C	1	100					
	2	Rest	0,5 ≤ O ₂ ≤ 30				
R	1			Residue*		0,5 ≤ H ₂ ≤ 5	
	2			Residue*		15 ≤ H ₂ ≤ 50	
N	1						100
	2			Residue*			0,5 ≤ N ₂ ≤ 5
	3			Residue*			5 ≤ N ₂ ≤ 50
	4			Residue*		0,5 ≤ H ₂ ≤ 10	0,5 ≤ N ₂ ≤ 5
	5					0,5 ≤ H ₂ ≤ 50	Residue*
O	1		100				
Z	Mixed gases with components that are not listed in the table or mixed gases with a composition outside the specified ranges**						

* Argon may be partially or completely replaced by helium.

** Two mixed gases with the same Z classification must not be exchanged for each other.

6.7 Code numbers for the yield strength, strength and elongation of the weld metal

Code number	ReL [MPa]	Rm [MPa]	A5 [%]	EN ISO standards concerned
Code number for the yield strength, strength and elongation of the weld metal				
35	355	440-570	22	636, 2560, 14341, 14171, 17632
38	380	470-600	20	
42	420	500-640	20	
46	460	530-680	20	
50	500	560-720	18	
55	550	610-780	18	16834, 18275, 18276, 26304
62	620	690-890	18	
69	690	760-960	17	
79	790	880-1080	16	
89	890	980-1180	15	

Identifier	Description	EN ISO standards concerned
Identifier for welding positions		
1	All positions	2560, 3580, 3581, 12153, 18275, 17632, 17633, 17634, 18276
2	All positions except for vertical down	
3	Butt weld in flat position, fillet weld in flat and horizontal positions	
4	Butt weld in flat position, fillet weld in flat position	
5	Vertical down position, and positions as in code number 3	

Code number	Temperature [°C] for impact energy > 47 J (one sample may be lower, but > 32 J)	EN ISO standards concerned
Identifier for impact energy		
Z	No requirement	636, 2560, 14341, 14171, 16384, 18275, 18276, 26304
A	+20	
0	0	
2	-20	
3	-30	
4	-40	
5	-50	
6	-60	
7	-70	14171, 18275, 18276
8	-80	
10	-100	14171

Code number	Yield [%]	Type of current	EN ISO standards concerned
Code number for yield and type of current			
1	≤ 105	Alternating and direct current	2560, 3580, 3581, 18275
2	≤ 105	Direct current	
3	>105≤ 125	Alternating and direct current	
4	>105≤ 125	Direct current	
5	>125≤ 160	Alternating and direct current	2560, 3581, 18275
6	>125≤ 160	Direct current	
7	>160	Alternating and direct current	
8	>160	Direct current	

Code number	Yield strength of the weld metal [MPa]	Tensile strength of the weld metal [MPa]	EN ISO standards concerned
Code number for yield strength and strength with single-run/two-run welding			
2T	275	370	14171
3T	355	470	14171, 17632
4T	420	520	
5T	500	600	

Code number	Maximum hydrogen content [ml/100g weld metal]	EN ISO standards concerned
Code number of hydrogen content in the weld-metal		
H5	5	2560, 3580, 14171, 17632, 17634, 18275, 18276, 26304
H10	10	
H15	15	

Code number	Type and properties	EN ISO standards concerned
Code number for the type of core		
R	Rutile, slowly solidifying slag, shielding gas required	12153, 17632, 17633, 17634, 18276
P	Rutile, fast solidifying slag, shielding gas required	
B	Basic, shielding gas required	
M	Metal powder, shielding gas required	
V	Rutile or basic/fluoride, shielding gas not required	17632
W	Basic/fluoride, slowly solidifying slag, shielding gas not required	
Y	Basic/fluoride, fast solidifying slag, shielding gas not required	
Z	Other types	12153, 17632, 17633, 17634, 18276
U	Without shielding gas, self-shielding	12153, 17633

A list of the abbreviations for the chemical composition has been omitted from this manual.

6.8 Classification system according to EN ISO

Classification system according to **EN ISO 18275-A** using a **FOX EV 70 Mo** as an example

E 55 3 MnMo B T 4 2 H10

Abbreviation for products/welding process Classification system according to **EN ISO 14341-A** taking an **EMK 8** as an example

G 46 4 M21 4Si1

Classification system according to **EN ISO 3581-A** using a **FOX EAS 4 M** as an example

Abbreviation for products/welding pocess Classification system according to **EN ISO 17632-A** taking a **Böhler Q 71 RC** as an example

6.9 Hardness conversion table

R_m = Tensile strength (MPa) / **HV** = Vickers hardness / **HB** = Brinell hardness / **HRC** = Rockwell hardness

R_m	HV	HB	HRC	R_m	HV	HB	HRC	R_m	HV	HB	HRC

Caution: Because of their approximate nature, conversion tables must be regarded as only an estimate of comparative values. It is recommended that hardness conversions be applied primarily to values such as specification limits, which are established by agreement or mandate, and that the conversion of test data be avoided whenever possible.

6.11 Ceramic backings

Type	Dimensions	Description	
CERAshape T14		Ceramic with trapezoidal groove for butt welds and V-welds; attached with self-adhesive aluminum strip	
CERAshape H6		Ceramic with trapezoidal groove for butt welds and V-welds; attached with self-adhesive aluminum strip	
CERAshape H12		Ceramic with trapezoidal groove for butt welds and V-welds; attached with self-adhesive aluminum strip	
CERAshape H19		Ceramic with trapezoidal groove for butt welds and V-welds; attached with self-adhesive aluminum strip	
CERAshape S7		Ceramic with cylindrical shape for X-welds and fillet welds; attached with self-adhesive aluminum strip	
CERAshape S10		Ceramic with cylindrical shape for X-welds and fillet welds; attached with self-adhesive aluminum strip	
CERAshape S12		Ceramic with cylindrical shape for X-welds and fillet welds; attached with self-adhesive aluminum strip	
CERAshape S15		Ceramic with cylindrical shape for X-welds and fillet welds; attached with self-adhesive aluminum strip	
CERAshape S20		Ceramic with cylindrical shape for X-welds and fillet welds; attached with self-adhesive aluminum strip	

This information is an aid for practitioners. It provides a simplified version of fundamental technical facts and does not claim to be complete. A guarantee of the suitability for a specific application requires an express written agreement in each case.

6.12 Finishing chemicals

Böhler Welding is a leading producer of superior pickling products for stainless steels and special alloys. We offer a wide range of finishing chemicals like pickling gels, pastes, sprays, liquids and cleaning agents. We help you restore stainless steel. Stainless steel retains its beautiful finish thanks to a protective layer that forms on the surface. Our products help customers around the world in their daily work of creating a superior stainless steel surface. Pickling of stainless steel is the technically superior method to obtain the best corrosion resistance. Our pickling pastes and sprays are highly effective and can be used in thinner coats than many other pickling products.

Unique products for all steps in the post-weld and surface treatment of stainless steel

1. Pre-Cleaning:

Avesta Cleaner 401, a heavy-duty stainless steel cleaner, suitable for pre-cleaning of oil and grease before pickling. The Cleaner 401 could also be used for maintenance cleaning together with Passivator 630 to restore and brighten stainless steel surfaces and remove surface rust.

2.1 Brush Pickling:

Avesta BlueOne Pickling Paste 130, a unique, safer-to-use pickling paste. This low-fuming pickling paste reduces toxic nitric fumes, resulting from pickling, by 80%. Suitable for brush pickling of welds and smaller surfaces in standard stainless steel grades such as 304 and 316. For tougher heavy-duty applications like Duplex and SMO and pickling at lower temperatures the Avesta RedOne Pickling Paste 140 can be an alternative.

2.2 Spray Pickling:

Avesta RedOne Pickling Spray 240, a unique, safer-to-use pickling spray with an up to 50% reduction of the toxic nitric fumes emitted during pickling. Suitable for spray pickling of larger surfaces in standard stainless steel grades such as 304 and 316. For tougher heavy-duty applications like Duplex and SMO and pickling at lower temperatures, the Avesta Duplex Pickling Spray 250 can be an alternative.

2.3 Bath Pickling:

Avesta Pickling Bath 302, a concentrate to be diluted with water depending on stainless steel grade. Recommended for immersion pickling of objects and circulation pickling of pipe systems.

3.1 Passivation:

Avesta FinishOne Passivator 630, an outstanding, safer-to-use, acid-free passivator. Helps remove free iron from the surface and regenerate the protective passive layer thus speeding up the passivation process.

4. Neutralization:

Avesta Neutraliser 502, for simple neutralization of acid rinse water. Following the pickling process, the rinse water is strongly acidic and contains dissolved heavy metal. For environmental reasons, this water should be treated before discharge.

5. Worker Safety:

A First Aid kit containing **Avesta First Aid Spray 910** (only available in Europe) and / or calcium gluconate gel for immediate rinsing / treatment of acid splashes caused by pickling products should be easily available.

6.13 Equipment

TERRA & URANOS – THE NEW REFERENCE IN WELDING MACHINES.

As a provider of welding solutions, we offer a unique portfolio of high-quality welding consumables, application services, accessories and welding equipment. With the Terra & Uranos ranges, we are setting new standards in all standard and special welding processes. The combination of welding filler metal and power source, which is unique in the industry and based on our application know-how, takes precision to a new dimension.

This allows you to obtain TOP CLASS welded joints that you will be proud of. This is what we stand for – with up to 5 years warranty on all Terra & Uranos welding equipment.

6.13.1 URANOS – FOR THE HIGHEST DEMANDS

Efficiency & technological excellence

URANOS welding equipment from Böhler Welding cover the highest technological needs.

Uranos perform the most advanced processes :
MIG/MAG, pulsed MIG/MAG, TIG AC/DC and MMA. They are equipped with high-tech power sources and accessories and could be connected and interfaced with robots.

What URANOS welding equipment are all about:

- » Large (3.5") digital user-friendly interface
- » greenWave® technology guarantees high energy-efficiency
- » MultiProcess inverters welding MMA, MIG/MAG and TIG DC HF
- » Ready for automatic and robot welding application
- » The power sources could be networked thanks to Weld@Net® Böhler Welding software

[more information](#)

6.13.2 TERRA – FOR STANDARD WELDING TASKS

Robust and user-friendly

TERRA welding equipment from Böhler Welding are available for MMA welding, TIG DC and MIG/MAG processes. The compact and robust design of the machines allows them to be used in a wide variety of working environments, even in confined spaces.

TERRA welding equipment from Böhler Welding thrive under heavy use and guarantee durable connections.

What TERRA welding equipment are all about:

- » Simple operation for the welder
- » Low weight
- » Ideal for steel and stainless steel
- » Flexibly deployable
- » Suitable for use on construction sites and fabrication shops

6.14 PPE – Personal Protective Equipment

YOUR SAFETY. OUR PASSION.

As a passionate developer of innovative products, we are the ideal partner and solution provider for safe welding. We put the welder's daily challenges and highest expectations into the centre of our activities. This creates trust into our products and guarantees effective protection, outstanding quality and excellent comfort in accomplishing the welder's tasks.

[more information](#)

WELDING HELMETS

BÖHLER Guardian helmets are designed for a wide range of welding and grinding applications. In the focus of product development is the welders' expectation for high quality, comfortable and durable products. This means lightweight products down to 480 grams with a robust headgear covered by soft sweatbands and highest ADF clarity with true colour technology. Your safety is our passion and drives our R&D department to provide innovative products to our costumers.

WELDING RESPIRATORY SYSTEMS

BÖHLER Air is our Powered Air-Purifying Respiratory (PAPR)-System that provides the welder with the best protection against particles and fumes related to welding and grinding applications. It supplies the welder with a constant airflow. The system is equipped with an audio, visual and vibration alarm to inform the user about low battery as well as filters needed to be changed. BÖHLER Air is tested and certified according to EN12941 with the highest protection class TH3.

WELDING GLOVES

“Nothing is closer to the welder than the welding gloves. They must be protective on the outside and comfortable on the inside.” Our BÖHLER welding gloves are designed to meet these expectations by selecting high quality leather suppliers, a controlled eco-friendly production process and our intention for a perfect fit.

EYEWEAR

All of our BÖHLER Eyewear models are designed for the use in industrial environments with a variety of glasses certified according to EN 166 F.

6.15 ESSC – SASC Equipments designed by UTP

6.15.1 Cladding nozzle 30 ES2-75 for limited access applications

Electroslag and submerged arc strip cladding nozzle
designed for small pipes internal cladding

Characteristics	
Allowed SOUDOTAPE size (mm)	15 - 20 - 30
Pipe internal diameter (mm)	
Longitudinal cladding	220
Circular cladding	300
Easy to install on all power sources	
ESAB / LINCOLN ELECTRIC / MILLER	

6.15.2 Cladding nozzle 60 ES3-207 for general purpose

Electroslag and submerged arc strip cladding nozzle
designed for general purpose weld overlay

Characteristics	
allowed SOUDOTAPE size (mm)	30 - 60
Pipe internal diameter (mm)	
Longitudinal cladding	380
Circular cladding	550
UTP nozzle 60 ES3 - 207 ready to ESSC process	
Select the configuration between ESAB / LINCOLN ELECTRIC / MILLER	
Add adaptation to SASC process	
Art. No	36558

**6.15.3 Cladding nozzle 125 ES3-300
for heavy duty up to 125mm strip electrodes**

Electroslag and submerged arc strip cladding nozzle designed for heavy duty weld overlay with strip electrode up to 125mm and current capacity higher than 2500A

Characteristics	
Allowed SOUDOTAPE size (mm)	15 to 125
Pipe internal diameter (mm)	
Longitudinal cladding	550
Circular cladding	700
Easy to install on all power sources	
ESAB / LINCOLN ELECTRIC / MILLER	

**6.15.4 UTP magnetic steering device
for high productivity applications**

- » ESSC process is characterized by high productivity.
- » UTP magnetic steering device is recommended for all stainless-steel alloys and nickel base when strip electrode size is over 60mm.
- » UTP magnetic steering device is efficient to control consistency of bead overlap, bead shape and improve surface appearance.
- » Available with 110V and 220V configuration

6.16 weldTECH – Perfect welding results

MORE SERVICE CREATES ADDED VALUE

Böhler welding offers its customers more than just outstanding welding filler metal products. After all, in practice, all that matters is a perfect welding result and efficient processes. We guarantee this with our industry-leading Application Services.

LASTING CONNECTIONS

With our individual expert support, we are the partner who reliably and permanently stands by your side – from consulting to process optimisation to the welded product and beyond.

PERSONAL, STRAIGHTFORWARD CONTACT

Simply contact the known contact person or send an e-mail to:

application.services@voestalpine.com

WITH OUR APPLICATION SERVICES WE OFFER

- » Product and application consulting
- » Efficiency consulting and process optimisation
- » Trainings and seminars
- » Support in the qualification of welding procedures (e.g. EN ISO 15617-7)
- » Prototype production (process development)
